QUESTION 1

You need to implement a new highly available storage solution for the Hyper-V environment. Which servers should you include in the scale-out file cluster?

A. CHI-SERVER1 and CHI-SERVER2

B. SEA3-HVNODE1 and SEA3-HVNODE2

C. SEA-SERVER1 and SEA-SERVER2

D. CHII-HVNODE1 and CHI1-HVNODE2

Correct Answer: B

QUESTION 2

Your network contains an Active Directory domain named contoso.com.

Your company has an enterprise root certification authority (CA) named CA1.

You plan to deploy Active Directory Federation Services (AD FS) to a server named Server1.

The company purchases a Microsoft Office 365 subscription.

You plan to register the company\\'s SMTP domain for Office 365 and to configure single sign-on for all users.

You need to identify which certificate or certificates are required for the planned deployment.

Which certificate or certificates should you identify? (Each correct answer presents a complete solution. Choose all that apply.)

A. a server authentication certificate that is issued by a trusted third-party root CA and that contains the subject name serverl.contoso.com

B. a server authentication certificate that is issued by CA1 and that contains the subject name Server1

C. a server authentication certificate that is issued by a trusted third-party root CA and that contains the subject name Server1

D. a server authentication certificate that is issued by CA1 and that contains the subject name serverl.contoso.com

E. self-signed server authentication certificates for server1.contoso.com

Correct Answer: DE

QUESTION 3

Your network contains 10 servers that run Windows Server 2012. The servers have the Hyper-V server role installed.

The servers host a Virtual Desktop Infrastructure (VDI) that contains persistent virtual machines. Each virtual machine is assigned to a specific user. Users can install software on their specific virtual machine.

You need to implement a solution to generate monthly reports that contain a list of all the installed software on the virtual machines. The solution must NOT require the installation of additional software on the virtual machines.

Which solution should you implement?

A. A Microsoft System Center 2012 Configuration Manager software inventory

B. A Microsoft System Center 2012 Configuration Manager hardware inventory

C. Microsoft Assessment and Planning (MAP) Toolkit scans

D. Microsoft Audit Collection Services (ACS) audit logs

Correct Answer: C

To assist in the planning for a migration of existing Windows-based computers to Windows 7, MAP provides a readiness scenario to help assess which computers are capable of running Windows 7. After the environment scan has been completed, MAP looks at computers running earlier versions of Windows, such as Windows XP and Windows Vista, and compares CPU speed, memory and free disk attributes to the minimum and recommended system requirements. When a computer doesn\\'t meet a specific requirement, such as that for installed memory. MAP provides a specific recommendation that indicates what action is required to bring the machine to the recommended level.

When the assessment is complete, the results are displayed in the MAP console. For Windows 7, MAP displays the following four types of results in separate sections: Inventory Summary Before Hardware Upgrades After Hardware Upgrades Device Compatibility Summary

---

QUESTION 4

Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012 R2. The network contains a System Center 2012 R2 Data Protection Manager (DPM) deployment. The domain contains six servers. The servers are configured as shown in the following table.

Server name	Role	Node in cluster
Server1	Domain controller	*Not applicable*
Server2	Domain controller	*Not applicable*
Server3	Microsoft SQL Server	Cluster1
Server4	Microsoft SQL Server	Cluster1
Server5	*Not applicable*	Cluster2
Server6	*Not applicable*	Cluster2

You install System Center 2012 R2 Virtual Machine Manager (VMM) on the nodes in Cluster2.

You configure VMM to use a database in Cluster1. Server5 is the first node in the cluster.

You need to back up the VMM encryption key.

What should you back up?

A. a system state backup of Server2

B. a full system backup of Server6

C. a system state backup of Server5

D. a full system backup of Server3

Correct Answer: A

Encryption keys in Active Directory Domain Services: If distributed key management (DKM) is configured, then you are storing VMM-related encryption keys in Active Directory Domain Services (AD DS). To back up these keys, back up Active Directory on a regular basis.

QUESTION 5

You administer an Active Directory Domain Services environment. There are no certification authorities (CAs) in the environment.

You plan to implement a two-tier CA hierarchy with an offline root CA.

You need to ensure that the issuing CA is not used to create additional subordinate CAs.

What should you do?

A. In the CAPolicy.inf file for the issuing CA, enter the following constraint: PathLength=1

B. In the CAPolicy.inf file for the root CA, enter the following constraint: PathLength=1

C. In the CAPolicy.inf file for the root CA, enter the following constraint: PathLength=2

D. In the CAPolicy.inf file for the issuing CA, enter the following constraint: PathLength=2

Correct Answer: B
