QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft Application Virtualization (App-V) 5.0 infrastructure. You package two complex applications named App1 and App2. You create a connection group that contains App1 and App2.

You discover that App2 overwrites some of the registry settings used by App1.

You need to recommend a solution for the deployment of App1 and App2 to meet the following requirements:

Prevent App2 from overwriting the registry settings of App1.

Ensure that App1 and App2 can share information.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Change the order of packages in the package library.
- B. Modify the PackageId of App1.
- C. Change the order of packages in the connection group.
- D. Create a single package that contains App1 and App2.
- E. Modify the VersionId of App1.

Correct Answer: C

<http://blogs.technet.com/b/appv/archive/2012/11/06/deploying-connection-groups-app-v-5-0.aspx> Note: The order of packages in the connection group is important. This determines the order in which the package contents are merged. So, in the following case, if there was a conflict (example: same registry value), the content of the "App1" package would be used.

QUESTION 2

You need to update App4 in the standard desktop image. The solution must meet the technical requirements and the application requirements.

Which four actions should you perform? To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run the App4A MSI package.	
Unmount the image and commit the changes.	
Add the App4A MSI package to the image.	
Mount the image.	
Export the image.	
Deploy the image.	
Capture the image.	
Generalize the installation.	

Correct Answer:

Actions	Answer Area
	Deploy the image.
Unmount the image and commit the changes.	Run the App4A MSI package.
Add the App4A MSI package to the image.	Generalize the installation.
Mount the image.	Capture the image.
Export the image.	

QUESTION 3

Your network contains servers that run Windows Server 2012 and client computers that run Windows 7. All of the client computers run a standard image of Windows 7.

The network has Microsoft Application Compatibility Toolkit (ACT) 6.0 deployed.

The network contains three computers. The computers are configured as shown in the following table.

Computer name	Function
Client1	Windows 7 production client
Client2	Windows 8 test client
Server1	ACT Log Processing Service ACT Log Processing Service share ACT database

You plan to upgrade all of the client computers to Windows 8.

You need to identify whether an application named App1 can run on Windows 8.

What should you deploy?

- A. An inventory-collector package to Client2
- B. An inventory-collector package to Client1
- C. A runtime-analysis package to Client1
- D. A runtime-analysis package to Client2

Correct Answer: D

QUESTION 4

You need to meet the application requirements for administering the App-V infrastructure. What should you install on Server1?

- A. The Microsoft Visual C++ 2010 Redistributable Package
- B. Microsoft SQL Server Native Client
- C. Microsoft .NET Framework 4.5
- D. Microsoft Silver light

Correct Answer: D

<http://technet.microsoft.com/en-us/library/jj713458.aspx>

Management console requires Silverlight, Visual C++2010 SP1, and .Net 4.0.

QUESTION 5

You need to implement an RDS infrastructure to meet the technical requirements. What should you do first?

- A. Install Microsoft SQL Server 2008 R2.
- B. Install the Failover Clustering feature.
- C. Install the Windows Internal Database feature.
- D. Install the Network Load Balancing (NLB) feature.

Correct Answer: D
