**QUESTION 1**

You manage several SQL Server 2008 instances.

You plan to collect performance data periodically on all instances by using the data collector. All collected data must be stored in the same database hosted on a single instance.

You need to collect and load performance data in the management data warehouse every 6 hours.

Which data collection process should you implement?

- A. Create a cached data collection.
- B. Create a scheduled non-cached data collection.
- C. Create an on-demand non-cached data collection.
- D. Create two different SQL Agent jobs that are scheduled at the same time. One job creates a data collection and the other job uploads the data collection.

Correct Answer: B

QUESTION 2

You are mastering the company database, including the SQL Server 2005 database which include a table called Production. Product. The table has more than 50 columns

The most common queries are listed below Transact-SQL statements. --QUERY 1SELECT [Name], [ProductLine], [ListPrice], [Class], [Style] FROM [Production]. [Product]WHERE [ProductLine] = 'T' --QUERY 2SELECT * FROM [Production].

[Product] ORDER BY [Name]

When you are minimizing the space required for the indexes.

You should select the best indexes to maintain the most common searched to the Production. Product tableWhich is the correct answer?

- A. You should develop a clustered index on the Name column.
- B. You should develop a nonclustered index on the Name column.
- C. You should develop a clustered index on the ProductLine, ListPrice, Class and Style columns.
- D. You should develop a nonclustered index on the ProductLine, ListPrice columns.

Correct Answer: A

QUESTION 3

You administer a SQL Server 2008 instance that contains a database named Sales.

A SQL Server login named SalesAppLogin maps to a database user named SalesAppUser in the Sales database.

You need to ensure that the database user can perform only the following tasks:

What should you do?

- A. Add SalesAppUser to the appropriate fixed database roles.
- B. Grant the appropriate object-level permissions to SalesAppUser.
- C. Grant the appropriate server-level permissions to SalesAppLogin.
- D. Grant the appropriate database-level permissions to SalesAppUser.

Correct Answer: D

QUESTION 4

You administer a SQL Server 2008 instance that contains a database named InsightDB.

The InsightDB database is used by an application that is continuously connected.

The application uses the INSERT command extensively. The application uses triggers to populate multiple tables.

You need to ensure that the reports generated by the application using the InsightDB database return current information with minimal negative effects on the application inserts.

What should you do?

- A. Use the database snapshot feature and configure the application to use the snapshot database.
- B. Set the isolation level to Read Uncommitted for the InsightDB database.
- C. Use the database replication feature and configure the application to use the replicated database.
- D. Set the isolation level to Read Committed Snapshot for the InsightDB database.

Correct Answer: D

QUESTION 5

You are managing a SQL Server 2008 instance which includes some applications for Home.com.

You set the SQL Server Agent service to implement through utilizing the SerTest\Test account.

You create a job named MailingTester that allows a file to be stored to a log server. The job could not run normally because it could not own proper access to the log server.

You decide to set the service of SQL Server Agent.

You should make sure that you could run the settings such that the SQL Server Agent service owns all access to the log server. Which is the correct answer?

- A. You should utilize the type of Domain account
- B. You should utilize the type of remote System account
- C. You should utilize the type of remote Service account
- D. You should utilize the type of Local Service account

Correct Answer: A
