QUESTION 1

Drag Drop question

Coho Vineyard & Winery

You plan to use certificate-based authentication for database mirroring of the **CRM** database between a principal database on SQL2 and a mirror database on SQL3. You plan to create the objects shown in the following table.

Server	Object type	Object name
SQL2	Certificate	SQL2MirrorCert
SQL2	Login	MirroringLogin
SQL2	Mirroring endpoint	MirroringEndpoint
SQL3	Certificate	SQL3MirrorCert
SQL3	Login	MirroringLogin
SQL3	Mirroring endpoint	MirroringEndpoint

You plan to export the SQL2MirrorCert certificate and copy it to SQL3, and you plan to export the SQL3MirrorCert certificate and copy it to SQL2.

You need to associate the certificates with the appropriate endpoints and logins.

What should you do?

Certificates

- SQL2MirrorCert
- SQL3MirrorCert

Answer Area

The diagram shows two server instances, SQL2 and SQL3. Each server has two objects: a MirroringLogin (represented by a person icon) and a MirroringEndpoint (represented by a black circle icon). The objects are arranged in a grid for drag-and-drop.

Correct Answer:

Coho Vineyard & Winery

You plan to use certificate-based authentication for database mirroring of the CRM database between a principal database on SQL2 and a mirror database on SQL3. You plan to create the objects shown in the following table.

Server	Object type	Object name
SQL2	Certificate	SQL2MirrorCert
SQL2	Login	MirroringLogin
SQL2	Mirroring endpoint	MirroringEndpoint
SQL3	Certificate	SQL3MirrorCert
SQL3	Login	MirroringLogin
SQL3	Mirroring endpoint	MirroringEndpoint

You plan to export the SQL2MirrorCert certificate and copy it to SQL3, and you plan to export the SQL3MirrorCert certificate and copy it to SQL2.

You need to associate the certificates with the appropriate endpoints and logins.

What should you do?

Certificates

SQL2MirrorCert

SQL3MirrorCert

Answer Area

QUESTION 2

You are the administrator of a SQL Server 2005 computer named SQL1. SQL1 contains two user databases. SQL1 also contains the publisher database for a transactional replication publication. Every night, a full backup is made of all databases. Transaction log backups are made twice each day for both user databases. SQL1 is configured to use SQL Server and Windows authentication. Client applications connect by using SQL Server login accounts. The disk subsystem on SQL1 experiences a complete failure. You replace the failed hardware, reinstall Microsoft Windows Server 2003, and reinstall SQL Server 2005. You need to ensure that SQL1 is operating normally as quickly as possible and with a minimum loss of data. Your solution must make the user databases available to client applications as soon as those databases are restored.

What should you do first?

- A. Restore all of the system databases.
- B. Restore the two user databases only.
- C. Restore the publisher database only.
- D. Re-create the transactional replication publication.

Correct Answer: A

**QUESTION 3**

You are reviewing the code that is used to retrieve order data in the ASP.NET Web application. You need to update the application to meet the security requirements. What should you do?

- A. Create a view to retrieve the order data, and replace the table name with the view name in the ASP.NET code.
- B. Create an HTTP endpoint that has BATCHES enabled, and modify the ASP.NET code to connect to the HTTP endpoint.
- C. Create a SQL Server login that has a complex password, and modify the ASP.NET code to connect by using the SQL Server login.
- D. Create a stored procedure to retrieve the order data, and modify the ASP.NET code to call the stored procedure by using parameters.

Correct Answer: D

QUESTION 4

You are a database administrator for your company. A user named Susan belongs to the Windows SalesManagers group. Susan needs a Reporting Services report to display annual sales information by territory. A user named Joe reports to Susan and belongs to the Windows Sales group. He needs a report that is limited to his sales territory, but still displays the same detailed sales data that is on Susan's report. You need to design a secure solution that meets the reporting needs of the users and that consumes the minimal amount of server resources.

What should you do?

- A. Design a report for Susan that includes two data regions. One data region is used for summary sales data. The other data region is used for the detailed sales data for each sales representative. Then, design a report for Joe that displays the detailed sales data.
- B. Design two reports for Susan. One report includes the territory information, and one report includes the detailed sales data. Then, design a report for Joe that displays the detailed sales data for his territories.
- C. Design a report for Susan that includes the territory information. Then, design a report for Joe that includes detailed sales data for his territories. Finally, configure Susans report so that it includes the data in Joes report.
- D. Design a parameterized report for Susan that includes all territory information. Then, design a linked report for Joe that links to Susans report.

Correct Answer: D

QUESTION 5

You need to implement encryption for SQL1 based on the companys technical requirements. What should you do?

- A. Implement the Server (Request Security) IPSec policy on SQL1.
- B. Enable encrypted connections for the SQL Server instance with the ForceEncryption option enabled.
- C. Create the acct1 database, and encrypt all data.
- D. Enforce the use of Kerberos authentication on SQL1.

Correct Answer: B
