**QUESTION 1**

You are a database developer. You plan to design a database solution by using SQL Server 2008.

The database application has a table named Transactions that contains millions of rows. The table has multiple columns that include transaction_id and transaction_date. There is a clustered index on the transaction_id column. There is a nonclustered index on the transaction_date column.

You discover that the following query takes a long time to execute.

```
SELECT transaction_id, transaction_date, transaction_notes
FROM transactions
WHERE transaction_type_id = 'FXO'
AND transaction_date between @start_date and @end_date
```

The summary of the execution plan is as shown in the following code segment.

```
--Filter (WHERE: ([transaction_type_id]='FXO'))
|--Nested Loops (Inner Join)
    |--Index Seek (OBJECT: ([transactions]. [nc_transactions_transacti
    |--Clustered Index Seek (OBJECT: ([transactions]. [PK_transacti
```

You need to ensure that the query retrieves data in minimum possible time. What should you do?

- A. Create a nonclustered index on the transaction_type_id column.
- B. Create a nonclustered index on the transaction_date and transaction_type_id columns.
- C. Create a nonclustered index on the transaction_date column and include the transaction_type_id and transaction_notes columns.
- D. Create a nonclustered index on the transaction_date and transaction_type_id columns and include the transaction_notes column.

Correct Answer: D

QUESTION 2

You have a stored procedure that is used to set up maintenance tasks. The stored procedure executes every night.

The stored procedure contains three critical data manipulation language (DML) statements that operate against a single table.

You need to prevent users from modifying any data in the table while the stored procedure executes.

Which locking hint should you use?

- A. NOLOCK

- B. READCOMMITTED
- C. REPEATABLE READ
- D. TABLOCKX

Correct Answer: D

QUESTION 3

You have a table that has 10 million rows. The table has a view that returns all of the rows.

You discover performance degradation when you run an unfiltered view.

You need to recommend a solution to replace the view. The solution must require that the returned data is filtered by a parameter.

What should you use?

- A. an indexed view
- B. a scalar function
- C. a table-valued function
- D. a table-valued type

Correct Answer: C

QUESTION 4

You are a database developer. You plan to design a database solution by using SQL Server 2008. A stored procedure in a database uses a transaction to retrieve data from a table and produces aggregations.

You must design a solution that meets the following requirements:

You need to ensure that the solution meets the requirements.

What isolation level should you use?

- A. SERIALIZABLE
- B. READ COMMITTED
- C. REPEATABLE READ
- D. READ UNCOMMITTED

Correct Answer: C

QUESTION 5

You have a SQL Server Integration Services (SSIS) package that contains an Execute Process task. You need to schedule the SSIS package to run on a regular basis. What should you do?

- A. Create a credential and a login. Configure a SQL Server Agent job to run the package by using the login.
- B. Create a credential and a proxy. Configure a SQL Server Agent job to run the package by using the proxy.
- C. Create a login and map a user to the login. Add the user to the db_owner role. Configure a SQL Server Agent job to run the package by using the login.
- D. Create a login and map the user to a login. Add the user to the db_securityadmin role. Configure a SQL Server Agent job to run the package by using the login.

Correct Answer: B
