**QUESTION 1**

You are a database developer. You plan to design a database solution by using SQL Server 2008.

The database contains a table named Claims. The structure of the Claims table is as shown in the following table.

Column Name	Description	Constraint
open_date	Claim received date	Does not allow the NULL value
close_date	Claim settled date	Allows the NULL value
status	<ul style="list-style-type: none">Set as Open when the claim is receivedSet as Closed when the claim is settled	-

Only two percent of the claims are open at any point in time.

You discover that queries on claims that have an Open status take a long time to execute.

You need to optimize the performance of the claim-processing queries.

What should you do?

- A. Use a partitioning function to partition the Claims table on the open_date column.
- B. Create a view for the Claims table by using a WHERE clause to include all rows that have a NULL value in the close_date column.
- C. Create an index for the Claims table by using a WHERE clause to include all rows that have a NULL value in the close_date column.
- D. Create a table-valued function for the Claims table by using a WHERE clause to include all rows that have a NULL value in the close_date column.

Correct Answer: C

QUESTION 2

You are a database developer. You plan to design a database solution by using SQL Server 2008.

A database contains a table named Customer. The structure of the Customer table is as shown in the following table.

Column Name	Data Type	Description
customer_id	int	Clustered primary key
customer_name	nvarchar(80)	Full name
address	nvarchar(1,000)	Address details
country_id	int	ID of home country

The solution uses the following stored procedure to return customer details.

```
CREATE PROC GetCustomersByCountry
    @CountryID int
AS
SELECT customer_id, customer_name
FROM Customer
WHERE country_id = @CountryID;
```

Users report that the stored procedure takes a long time to execute. You need to optimize the performance of the stored procedure.

What should you do?

- A. Recreate the primary key as a nonclustered unique index and build a clustered index on the country_id column.
- B. Build a nonclustered index on the country_id column and use the INCLUDE clause to include the customer_name column.
- C. Build a nonclustered index on the country_id, customer_name, and customer_id columns.
- D. Build a nonclustered index only on the country_id column.

Correct Answer: B

QUESTION 3

You plan to deploy a new application.

The application will perform the following operations:

You need to configure a login to support the deployment of the new application. The solution must ensure that the application uses the most restrictive permissions possible.

What should you do?

- A. Add the login to the sysadmin server role.
- B. Add the login to the dbcreator and securityadmin server roles.
- C. Add the login to the diskadmin and securityadmin server roles. Once the database is created, add a user to the db_backupoperator database role.

D. Add the login to the diskadmin and serveradmin server roles. Once the database is created, add a user to the db_backupoperator database role.

Correct Answer: B

QUESTION 4

You are a database developer. You plan to design a database solution by using SQL Server 2008.

A stored procedure uses the INSERT, UPDATE, and DELETE statements separately to load data into a table. You need to rewrite the stored procedure to use a single statement to load the data.

What should you do?

- A. Write a MERGE statement by using a WHEN MATCHED clause and a WHEN NOT MATCHED BY TARGET clause.
- B. Write a MERGE statement by using a WHEN MATCHED clause and a WHEN NOT MATCHED BY SOURCE clause.
- C. Write a MERGE statement by using a WHEN MATCHED clause, a WHEN NOT MATCHED BY TARGET clause, and a WHEN NOT MATCHED BY SOURCE clause.
- D. Write a MERGE statement by using a WHEN MATCHED clause and two WHEN NOT MATCHED BY SOURCE clauses.

Correct Answer: C

QUESTION 5

You use SQL Server 2008 to design a database that will hold incoming XML responses for an EDI system.

You have the following requirements:

The data is accessible to heterogeneous platforms:

You need to design the database to meet the given requirements.

What should you do?

- A. Use SQL Server 2008 tables to store data and include proper indexes.
- B. Use ANSI text files to store text reports, and use SQL Server 2008 tables to store numerical reports.
- C. Save reports in binary format in a file within a Windows folder. Save the path of the file in SQL Server 2008 tables.
- D. Store reports in XML format, and use SQL Server 2008 tables to store the data. Index the XML data to improve performance.

Correct Answer: D
