**QUESTION 1**

You need to design a stored procedure that contains a transaction. If an error condition causes the transaction to roll back, a temporary result set must be available to the query that follows the failed transaction. Which temporary storage object should you use?

- A. a temporary table
- B. a derived table
- C. a table variable
- D. a common table expression (CTE)

Correct Answer: C

QUESTION 2

You have a database that contains two tables.

Both the XACT_ABORT database option and the IMPLICIT_TRANSACTIONS database option are set to OFF.

You need to update both tables. If an update fails on either table, neither table should be updated.

What should you do?

- A. Use a transaction.
- B. Change the isolation level.
- C. Use the TABLOCK query hint.
- D. Use the UPDLOCK query hint.

Correct Answer: A

QUESTION 3

A database contains two tables named Table1 and Table1_Details. Table1_Details contains details about the items in Table1.

You need to ensure that when an item is removed from Table1, all related items are removed from Table1_Details.

You must achieve this goal by using the minimum amount of Transact-SQL code.

What should you do?

- A. Create a foreign key relationship. Set Cascade Delete to Set Null.

- B. Create a foreign key relationship. Set Cascade Delete to Cascade.
- C. Create a trigger on Table1_Details that fires on the Delete action.
- D. Create a stored procedure that deletes all related items from Table1_Details.

Correct Answer: B

QUESTION 4

You are a database developer. You plan to create a database by using SQL Server 2008. A database contains a table named Sales. The Sales table contains customer order summary information.

You create a stored procedure that uses a SELECT statement. At the moment of execution, the procedure must return a precise summation of the total sales for the current day. You need to use a query hint to prevent any data modification in

the Sales table when the stored procedure is being executed.

Which query hint should you recommend?

- A. READPAST
- B. HOLDLOCK
- C. TABLOCKX
- D. READCOMMITTED

Correct Answer: C

QUESTION 5

You are a database developer. You plan to design a database solution by using SQL Server 2008.

The database will contain a table to stage data from an external source. The imported data will contain a field named TransactionTime. The TransactionTime field will use the hh:mm:ss.[m] format (such as 12:55:30.1).

You need to select the appropriate data type for the TransactionTime field. You want to achieve this goal by incurring minimum amount of storage cost.

Which data type should you use?

- A. time
- B. datetime2
- C. smalldatetime

D. time (1)

Correct Answer: D
