QUESTION 1

Which of the following statements about the tempdb system database is FALSE?

- A. It is a globally available resource for all connected users.
- B. It can hold explicitly or implicitly created database objects.
- C. It must be sized in accordance with the smallest user-database on the machine.
- D. It is created every time the SQL Server instance is restarted.

Correct Answer: C

QUESTION 2

You have configured Resource Governor with three resource pools.

You have assigned the first resource pool a minimum CPU and memory value of 20%.

You have assigned the second resource pool a minimum CPU and memory value of 30%.

You want to assign maximum CPU and memory values to the third resource pool.

What is the maximum CPU and memory value you can assign to this resource pool?

- A. 30%
- B. 50%
- C. 70%
- D. 100%

Correct Answer: B

The maximum resource value assigned to the third pool is 65%; the sum of the minimum resource values assigned to the other pools is 50%.

Note: MIN_CPU_PERCENT and MAX_CPU_PERCENT

These settings are the minimum and maximum guaranteed average CPU bandwidth for all requests in the resource pool when there is CPU contention. You can use these settings to establish predictable CPU resource usage for multiple workloads that is based on the needs of each workload. For example, assume the Sales and Marketing departments in a company share the same database. The Sales department has a CPU-intensive workload with high-priority queries. The Marketing department also has a CPU-intensive workload, but has lower-priority queries. By creating a separate resource pool for each department, you can assign a minimum CPU percentage of 70 for the Sales resource pool and a maximum CPU percentage of 30 for the Marketing resource pool. This ensures that the Sales workload receives the CPU resources it requires and the Marketing workload is isolated from the CPU demands of the Sales workload. Note that the maximum CPU percentage is an opportunistic maximum. If there is available CPU capacity, the workload uses it up to 100 percent. The maximum value only applies when there is contention for CPU resources. In this example, if

the Sales workload is switched off, the Marketing workload can use 100 percent of the CPU if needed.

QUESTION 3

You are the senior database administrator for a Microsoft SQL Server environment that uses Microsoft Azure SQL Database.

You need to grant a junior database administrator only the permissions required to create new logins.

Which Microsoft Azure SQL Database role should you assign the junior database administrator?

- A. setupadmin
- B. loginmanager
- C. securityadmin
- D. serveradmin

Correct Answer: B

Members of the login manager role can create new logins in the master database. References: <https://docs.microsoft.com/en-us/azure/sql-database/sql-database-manage-logins>

QUESTION 4

You administer a Microsoft SQL Server instance.

You need to configure a new database to support FILETABLES.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Disable FILESTREAM on the Database.
- B. Enable FILESTREAM on the Server Instance.
- C. Configure the Database for Partial Containment.
- D. Create a non-empty FILESTREAM file group.
- E. Enable Contained Databases on the Server Instance.
- F. Set the FILESTREAM directory name on the Database.

Correct Answer: BDF

QUESTION 5

You want to simulate read, write, checkpoint, backup, sort, and read-ahead activities for your organization's SQL Server 2012 deployment. Which of the following tools would you use to accomplish this goal?

- A. SQLIO
- B. SQLIOSim
- C. SQLIOStress
- D. chkdsk

Correct Answer: B
