**QUESTION 1**

You work as a database developer at ABC.com. The ABC.com network consists of a single domain named ABC.com. ABC.com makes use of Microsoft SQL Server 2012 in their environment.

You are in the process of creating a SQL Server Integration Services (SSIS) package. You have decided to make use of Expression Task.

Which of the following is TRUE with regards to Expression Task?

A. It creates and evaluates expressions that set variable values at runtime.

B. It provides code to perform functions that are not available in the built-in tasks and transformations that SQL Server Integration Services provides.

C. It runs an application or batch file as part of a SQL Server Integration Services package workflow.

D. It allows you to run SQL statements during package execution.

Correct Answer: A

**QUESTION 2**

You develop a SQL Server Integration Services (SSIS) project by using the Package Deployment Model. A package in the project extracts data from a Windows Azure SQL Database.

The package is deployed to SQL Server.

The package is not producing the desired results.

You need to generate the .mdmp and .tmp debug files in order to troubleshoot the issues.

What should you do?

A. Execute the catalog.add_data_tap stored procedure with the package execution_id.

B. Execute the catalog.create_execution_dump stored procedure with the package execution_id.

C. Run the DTEXEC utility with the /DumpOnError option.

D. Run the DTEXEC utility with the /Reporting V option.

Correct Answer: C

**QUESTION 3**

You are using the Knowledge Discovery feature of the Data Quality Services (DQS) client application to modify an existing knowledge base. In the mapping configuration, two of the three columns are mapped to existing domains in the

knowledge base. The third column, named Team Type, does not yet have a domain.

You need to complete the mapping of the Team Type column.

What should you do?

A. Add a column mapping for the Team Type column.

B. Map a composite domain to the source column.

C. Create a composite domain that includes the Team Type column.

D. Add a domain for the Team Type column.

Correct Answer: D

**QUESTION 4**

You are implementing a new SQL Server Integration Services (SSIS) package that loads data from various flat files and a Microsoft Azure SQL Database database.

Daily transactions must be loaded into a staging database. All the SSIS tasks will use the CurrentDate variable date.

You need to set the CurrentDate variable to the current execution date when the package starts. You need to achieve this goal by using the least amount of development effort.

What should you use to set the variable?

A. an Expression task

B. an Execute SQL task

C. a Script component

D. a Script task

Correct Answer: A

Property expression is an expression that is assigned to a property to enable dynamic update of the property at run time. For example, a property expression can update the To line that a Send Mail task uses by inserting an e-mail address

that is stored in a variable.

An expression can be added to a package, task, Foreach Loop, For Loop, Sequence, Foreach enumerator, event handler, a package or project level connection manager, or log provider. Any property of these objects that is read/write can

implement a property expression. Integration Services also supports the use of property expressions in some custom properties of data flow components. Variables and precedence constraints do not support property expressions, but they

include special properties in which you can use expressions.

Property expressions can be updated in different ways:

User-defined variables can be included in package configurations and then updated when the package is deployed. At run time, the property expression is evaluated using the updated variable value. System variables that are included in

expressions are updated at run time, which changes the results of the property evaluation.

Date and time functions are evaluated at run time and provide the updated values to property expressions.

Variables in expressions can be updated by the scripts that the Script task and the Script component run.

**QUESTION 5**

You are creating a SQL Server Integration Services (SSIS) package to populate a fact table from a source table. The fact table and source table are located in a SQL Azure database. The source table has a price field and a tax field. The OLE

DB source uses the data access mode of Table.

You have the following requirements:

The fact table must populate a column named TotalCost that computes the sum of

the price and tax columns.

Before the sum is calculated, any records that have a price of zero must be discarded.

You need to create the SSIS package in SQL Server Data Tools.

In what sequence should you order four of the listed components for the data flow task? (To answer, move the appropriate components from the list of components to the answer area and arrange them in the correct order.)

Select and Place:

Conditional Split

Data Conversion

OLE DB Destination

Multicast

Derived Column

Copy Column

Data Profiling Task

OLE DB Source

Correct Answer:

OLE DB Source

Data Conversion

Conditional Split

Derived Column

Multicast

OLE DB Destination

Copy Column

Data Profiling Task
