-  **800,000+** Satisfied Customers

QUESTION 1

What should you recommend for the updates to Sales.TransactionHistory?

- A. a REPEATABLE READ isolation level
- B. implicit transactions
- C. query hints
- D. a SNAPSHOT isolation level

Correct Answer: A

QUESTION 2

You need to recommend a database reporting solution that meets the business requirements. What should you include in the recommendation?

- A. Data collection
- B. Performance Monitor
- C. A maintenance plan
- D. A dynamic management view

Correct Answer: A

*

Scenario: System administrators must be able to run real-time reports on disk usage.

*

The data collector provides an historical report for each of the System Data collection sets. Each of the following reports use data that is stored in the management data warehouse:

Disk Usage Summary Query Statistics History Server Activity History

You can use these reports to obtain information for monitoring system capacity and troubleshooting system performance.

QUESTION 3

You are the administrator for a SQL Server 2014 instance that stores the data for an online transaction processing sales system.

The company takes full backups every week; differential backups on the days with no full backups; and hourly

transaction backups. These backups are stored on a backup server in the company's data center. Every week, the company places the full backup on a tape and sends it to a third-party backup storage system.

The company is worried that a disaster might occur that could destroy their computer center and cause them to lose orders.

You need to determine the best method for providing the smallest amount of data loss and downtime without leasing or purchasing additional physical locations.

What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Set up SQL Server Always On with a SQL Azure database as a replica.
- B. Set up SQL Server Always On by using a SQL Server on a Windows Azure Virtual Machine.
- C. Put the differential backup on tape and send it to the third-party backup storage system.
- D. Use the Microsoft SQL Server Backup to Microsoft Windows Azure Tool to direct all backups to a different geographical location.

Correct Answer: D

SQL Server 2012 was the first version to provide the ability to back up databases to the Cloud, and SQL Server 2014 improves on the process.

Microsoft SQL Server Backup to Windows Azure Tool enables backup to Windows Azure Blob Storage and encrypts and compresses SQL Server backups stored locally or in the cloud.

QUESTION 4

You need to recommend a solution to meet the security requirements of the junior database administrators.

What should you include in the recommendation?

- A. A server role
- B. A database role
- C. A credential
- D. A shared login

Correct Answer: C

*

Scenario: A group of junior database administrators must be able to view the server state of the SQL Server instance that hosts the Sales database. The junior database administrators will not have any other administrative rights.

*

Credentials provide a way to allow SQL Server Authentication users to have an identity outside of SQL Server. Credentials can also be used when a SQL Server Authentication user needs access to a domain resource, such as a file location to store a backup.

QUESTION 5

You use SQL Server 2014 to maintain the data used by applications at your company.

You want to execute two statements.

You need to guarantee that either both statements succeed, or both statements fail together as a batch.

Which code should you use?

- A. BEGIN TRY
INSERT TABLE1 (FIELD1) VALUES ('ONE')
INSERT TABLE2 (FIELD1) VALUES ('TWO')
END TRY
BEGIN CATCH
ROLLBACK TRANSACTION
THROW
END CATCH
- B. BEGIN TRY
INSERT TABLE1 (FIELD1) VALUES ('ONE')
INSERT TABLE2 (FIELD1) VALUES ('TWO')
END TRY
BEGIN CATCH
THROW
ROLLBACK TRANSACTION
END CATCH
- C. BEGIN TRANSACTION
INSERT TABLE1 (FIELD1) VALUES ('ONE')
INSERT TABLE2 (FIELD1) VALUES ('TWO')
IF @@ERROR = 0
COMMIT TRANSACTION
ELSE
ROLLBACK TRANSACTION
- D. BEGIN TRY
BEGIN TRANSACTION
INSERT TABLE1 (FIELD1) VALUES ('ONE')
INSERT TABLE2 (FIELD1) VALUES ('TWO')
COMMIT TRANSACTION
END TRY
BEGIN CATCH
ROLLBACK TRANSACTION
END CATCH
- E. BEGIN TRY
INSERT TABLE1 (FIELD1) VALUES ('ONE')
INSERT TABLE2 (FIELD1) VALUES ('TWO')
END TRY
BEGIN CATCH
THROW
END CATCH

A. Option A

B. Option B

C. Option C

D. Option D

E. Option E

Correct Answer: D

Structure should be: BEGIN TRY BEGIN TRANSACTION COMMIT TRANSACTION END TRY BEGIN CATCH ROLLBACK TRANSACTION END CATCH. Reference: TRY...CATCH (Transact-SQL)
