-  **800,000+** Satisfied Customers

### QUESTION 1

You have two SQL Server 2014 instances named SQLDev and SQLProd.

You plan to create a new database on SQLProd that will use SQL Server Authentication.

You need to ensure that when the new database is copied from SQLProd to SQLDev, users can connect to the database on SQLDev even if they do not have a login on the SQLDev instance.

What should you use?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Triggers
- B. Contained database
- C. SQL Server Analysis Services (SSAS) scripts
- D. Extended Events
- E. SQL Server Integration Services (SSIS) scripts

Correct Answer: B

A fully contained database includes all the settings and metadata required to define the database and has no configuration dependencies on the instance of the SQL Server Database Engine where the database is installed.

Reference: Contained Databases

---

### QUESTION 2

You are troubleshooting an application that runs a query. The application frequently causes deadlocks.

You need to identify which transaction causes the deadlock.

What should you do?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Query the sys.dm\_exec\_sessions dynamic management view.
- B. Query the sys.dm\_exec\_requests dynamic management view.
- C. Create a trace in SQL Server Profiler that contains the Deadlock graph event
- D. Create an extended events session to capture deadlock information.

Correct Answer: D

Troubleshooting deadlocks

You have been receiving reports from users indicating that certain applications are returning deadlock errors. To maximize the effectiveness of troubleshooting these problems, you decide to focus on the deadlocks that are hit most

frequently.

You create an Extended Events session that:

/ Configures deadlock event tracking for the session.

/ Specifies a target that aggregates based on an identifier for the deadlock.

You run the Extended Events session, and after additional deadlocks are reported you are able to obtain aggregated deadlock information, along with the complete XML deadlock graph for each source. Using this information you are able to

pin point the most common deadlocks and start working on a solution.

Create an Extended Events Session

View Event Session Data

---

### QUESTION 3

You need to recommend changes to the ERP application to resolve the search issue. The solution must minimize the impact on other queries generated from the ERP application. What should you recommend changing?

- A. The collation of the Products table
- B. The index on the ProductName column
- C. The collation of the ProductName column
- D. The data type of the ProductName column

Correct Answer: C

---

### QUESTION 4

You need to recommend a feature to support your backup solution.

What should you include in the recommendation?

- A. Transparent Data Encryption (TDE)
- B. Column-level encryption
- C. An NTFS file permission
- D. A Secure Sockets Layer (SSL)

Correct Answer: A

\*

Scenario: - You must encrypt the backup files to meet regulatory compliance requirements. The encryption strategy must minimize changes to the databases and to the applications.

\*

Transparent data encryption (TDE) performs real-time I/O encryption and decryption of the data and log files. The encryption uses a database encryption key (DEK), which is stored in the database boot record for availability during recovery.

### QUESTION 5

You are designing an authentication strategy for a new server that has SQL Server 2014 installed. The strategy must meet the following business requirements:

The account used to generate reports must be allowed to make a connection during certain hours only.

Failed authentication requests must be logged.

You need to recommend a technology that meets each business requirement. The solution must minimize the amount of events that are logged.

Which technologies should you recommend? To answer, drag the appropriate solution to the correct business requirement in the answer area.

Select and Place:

Technologies	Answer Area
login auditing	The account used to generate reports must be allowed to make a connection during certain hours only.
logon triggers	Failed authentication requests must be logged.
C2 audit tracing	
Policy-Based Management	

Technology

Technology

*www.Pass4Lead.com*

Correct Answer:

Technologies	Answer Area	
<input type="checkbox"/>	The account used to generate reports must be allowed to make a connection during certain hours only.	logon triggers
<input type="checkbox"/>	Failed authentication requests must be logged.	login auditing
<input checked="" type="checkbox"/> C2 audit tracing		
<input type="checkbox"/> Policy-Based Management		

\* Logon triggers fire stored procedures in response to a LOGON event. This event is raised when a user session is established with an instance of SQL Server.

Logon triggers fire after the authentication phase of logging in finishes, but before the user session is actually established.

You can use logon triggers to audit and control server sessions, such as by tracking login activity, restricting logins to SQL Server, or limiting the number of sessions for a specific login.

\* Login auditing can be configured to write to the error log on the following events.

Failed logins

Successful logins

Both failed and successful logins

Incorrect:

\* C2 audit mode can be configured through SQL Server Management Studio or with the c2 audit mode option in sp\_configure. Selecting this option will configure the server to record both failed and successful attempts to access statements and objects.
