QUESTION 1

You are the database administrator of a SQL Server 2012 data warehouse implemented as a single database on a production server. The database is constantly updated by using SQL Server Integration Services (SSIS) packages and SQL Server Analysis Services (SSAS) cube writeback operations.

The database uses the full recovery model. A backup strategy has been implemented to minimize data loss in the event of hardware failure.

SQL Server Agent jobs have been configured to implement the following backup operations:

A full database backup every day at 12:00 A.M.

Differential database backups every day at 6:00 A.M., 12:00 P.M., and 6:00 P.M.

Transaction log backups every hour on the hour.

At 2:38 P.M. a SSIS package corrupts the data in a fact table. The corruption cannot be undone. You are notified at 3:15 P.M. You immediately take the database offline to prevent further data access and modification.

You need to restore the data warehouse and minimize downtime and data loss.

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

	Perform a transaction log backup by using the NORECOVERY option.
Restore the most recent transaction log backup by using the STOPATMARK and RECOVERY options.	Restore the most recent full database backup by using the NORECOVERY option.
Perform a differential database backup by using the NORECOVERY option.	Restore each transaction log backup since the last full database backup, other than the most recent one, by using the NORECOVERY option.
	Restore the most recent transaction log backup by using the STOPAT and RECOVERY options.
Restore the most recent differential database backup by using the NORECOVERY option.	
Restore all transaction log backups since the last differential database backup, other than the most recent one, by using the NORECOVERY option.	

QUESTION 2

You are developing a SQL Server Analysis Services (SSAS) tabular database.

To maximize performance, the queries must be resolved by using cache unless otherwise specified in the connection string.

You need to configure the appropriate query mode.

Which query mode should you select?

A. In-Memory with DirectQuery

B. DirectQuery with In-Memory

C. DirectQuery

D. In-Memory

Correct Answer: A

QUESTION 3

You are designing a SQL Server Reporting Services (SSRS) solution.

An existing report aggregates data from a SQL Server database in a chart.

You need to use the chart in a new report and ensure that other users can use the chart in their reports.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

In Power View, open the report that contains the chart.

In Report Designer, insert the report part into a new report.

In Report Designer, open the report that contains the chart.

In Report Builder, insert the report part into a new report.

In Power View, insert the report part into a new report.

Select the chart for publication as a report part and publish the report.

Correct Answer:

In Power View, open the report that contains the chart.

In Report Designer, insert the report part into a new report.

In Power View, insert the report part into a new report.

In Report Designer, open the report that contains the chart.

Select the chart for publication as a report part and publish the report.

In Report Builder, insert the report part into a new report.

QUESTION 4

You are designing a SQL Server Reporting Services (SSRS) report to display product names and their year-to-date (YTD) sales quantity YTD sales quantity values are classified in three bands: High Sales, Medium Sales, and Low Sales.

You add a table to the report. Then you define two columns based on the fields named ProductName and YTDSalesQuantity.

You need to set the color of the product text to red, yellow, or blue, depending on the value of the YTD sales quantity values.

What should you do?

A. Use an expression for the TextDecoration property of the text box.

B. Use an expression for the Style property of the text box.

C. Add an indicator to the table.

D. Use an expression for the Font property of the text box.

E. Use an expression for the Color property of the text box.

Correct Answer: E

QUESTION 5

You need to recommend a SQL Server Integration Services (SSIS) package design that meets the ETL requirements. What should you include in the recommendation?

A. Add new rows for changes to existing dimension members and enable inferred members.

B. Update non-key attributes in the dimension tables to use new values.

C. Update key attributes in the dimension tables to use new values.

D. Add new rows for changes to existing dimension members and disable inferred members.

Correct Answer: A
