QUESTION 1

Your company\\'s Microsoft Visual Studio Team Foundation Server (TFS) installation has a robust data tier that includes a Data Warehouse Server and Microsoft SQL Server Analysis Services.

During the typical processing of your data warehouse, you see that the length of time it takes for the warehouse adapters to pull data from the operational store, transform it, and then write it to the warehouse is incrementally increasing.

You need to decrease the time between refreshes in order to reduce the processing time.

Which service should you access to change the settings?

A. AdministrationService

B. JobsService

C. TeamProjectCollectionService

D. WarehouseControlWebService

Correct Answer: D

QUESTION 2

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server.

You create a new project using the default Visual Studio Scrum 2.0 template. You want to inform the product owner when a Product Backlog Item (PBI) is ready for testing.

You need to ensure that when the development of a PBI has been completed, the tester is able to change the state of the item to be Ready for Acceptance Testing. You need to achieve this goal without developing custom code. What are two possible ways to accomplish this goal? (Each correct answer presents a complete solution. Choose two.)

A. Use the TFSFieldMapping command to map a new state for Product Backlog Item.

B. Use the Visual Studio Process Template editor to modify the Product Backlog Item template.

C. Write a Visual Studio Extension (VSIX) so developers can change the state in Visual Studio.

D. Modify the Product Backlog Item template XML and use the witadmin command to import the modified XML.

Correct Answer: BD

QUESTION 3

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server installed at a main office.

A TFS Proxy is installed at the branch office with a default port number.

You need to access TFS from the branch office to add and manage work items.

What should you do?

A. Navigate to the Internet Options of your browser. In the LAN settings area, configure the name of the TFS proxy and enter the port number 8081.

B. Navigate to the Internet Options of your browser. In the LAN settings area, configure the name of the TFS proxy and enter the port number 8080.

C. In the Add/Remove Team Foundation Server dialog box within Visual Studio 2012, enter the name of the TFS server.

D. From the Source Control section of Visual Studio 2012, enter the name of the proxy server and port number 8081.

Correct Answer: C

QUESTION 4

Your company has a Microsoft Visual Studio Team Foundation Server (TFS) 2013. The company uses a Microsoft SharePoint instance as part of the physical TFS setup.

The IT department is configuring scheduled backups.

You need to grant the system administrators the appropriate permissions to configure the scheduled backups.

Which permissions or roles should you assign to the system administrators? To answer, drag the appropriate permissions to the correct system. Each permissions may be used once, more than once, or not at all. You may need to drag the

split bar between panes or scroll to view content.

Select and Place:
