QUESTION 1

You are designing a complex and critical Windows desktop application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to implement a logging strategy for the application.

You need to record all unexpected errors that occur in the application.

What should you do?

- A. Subscribe to the unhandled exception event handler for the AppDomain object. Record relevant application-specific information to an external log.
- B. Subscribe to the unhandled exception event handler for the application's dispatcher on the main application thread. Record relevant application-specific information to an external log.
- C. Create a generic catch (Exception e) block in the Main method of the application. Record relevant application-specific information to a log in the Main method.
- D. Create a global WIN 32 unhandled exception filter. Record relevant application-specific information to an external log from within the filter.

Correct Answer: D

QUESTION 2

You are designing a Windows Presentation Foundation (WPF) application that accesses a business tier. The business tier is implemented as a Windows Communication Foundation (WCF) service and stores data in a Microsoft SQL Server

2008 database.

The WCF service will be accessed by external applications that do not use the .NET Framework.

You need to recommend an approach for passing data between layers.

What should you recommend?

- A. Use custom .NET classes with XML serialization.
- B. Use custom .NET classes with binary serialization.
- C. Use a DataSet object.
- D. Use the DiffGram XML format.

Correct Answer: A

QUESTION 3

You are designing a distributed Windows Presentation Foundation (WPF) application.

You have the following requirements:

Ensure that all errors are logged in a central location.

Ensure that the WPF application logs related errors within a single transaction.

Secure error information during transmission.

You need to recommend a strategy for collecting error information.

What should you recommend?

- A. Write the information to the Windows Application log on each client system. Use Windows Error Reporting to collect the results.
- B. Write the information to the Windows Application log on each client system. Use Windows Management Instrumentation (WMI) to collect the results.
- C. Create a Windows Communication Foundation (WCF) service. Use the basicHttpBinding protocol to transport the information.
- D. Create a Windows Communication Foundation (WCF) service. Use the wsHttpBinding protocol to transport the information.

Correct Answer: A

QUESTION 4

You are designing an application by using Windows Presentation Foundation (WPF) and Microsoft .NET Framework 4.

The application allows users to view product details. Product managers can modify the product details for the products that they manage.

You plan to design the application by using the Model-View-ViewModel (M-V-VM) pattern. You need to ensure that the product details can be viewed by all users and modified only by product managers.

What should you do?

- A. Create a separate window to modify data. Create a separate window to view data.
- B. In the ViewModel, hide all input controls if the user's role is a Product Manager.
- C. In the ViewModel, disable all input controls if the user's role is not a Product Manager,
- D. Create a separate StackPanel in the window to modify data. Create a separate StackPanel in the window to view data.

Correct Answer: C

QUESTION 5

You are preparing to deploy a solution that includes a Windows Forms application and several COM components. Unsigned interop assemblies have been created for each of the COM components.

You need to recommend an approach for deploying the solution.

What should you recommend?

- A. Deploy the windows Forms application and interop assemblies to a folder on the client computer. Sign the interop assemblies.
- B. Deploy the Windows Forms application and COM components to a folder on the client computer. Deploy the interop assemblies to the Global Assembly Cache (GAC).
- C. Deploy the Windows Forms application, COM components, and interop assemblies to a folder on the client computer. Register the COM components.
- D. Deploy the Windows Forms application to a folder on the client computer. Deploy the COM components and interop assemblies to the Global Assembly Cache (GAC). Register the COM components.

Correct Answer: C
