QUESTION 1

You need to recommend a debugging strategy for JavaScript code on the shopping cart page. Which approach should you recommend?

- A. Use of the Microsoft Script Debugger
- B. Use of the Internet Explorer Developer Tools
- C. Attaching a debugger to the Internet Explorer process
- D. Attaching a debugger to the Web development server process

Correct Answer: C

QUESTION 2

You are designing a process for deploying an ASP.NET MVC 2 Web application to IIS 6.0. You need to ensure that the Web application properly handles Web requests. Which approach should you recommend?

- A. Configure IIS to map all requests to aspnet_isapi.dll by using a wildcard script map.
- B. Configure IIS to map all requests to aspnet_wp.exe by using a wildcard script map.
- C. Modify the Web application to route all requests to an HttpHandler class.
- D. Modify the Web application to route all requests to an HttpModule class.

Correct Answer: A

QUESTION 3

An ASP.NET Web application stores data in a Microsoft SQL Server database that runs on a separate server. The company requires all database access to be performed under the identity of the user that is connected to the application.

The Web application uses integrated security in the database string. During testing, the Web application is unable to authenticate to the database as the connected user. You need to design an authentication strategy. Which approach should you recommend?

- A. Run the Web application under the System account.
- B. Run the Web application under the Network Service account.
- C. Configure the Web application for constrained delegation.
- D. Set the identity element of the Web application configuration to impersonate="true\".

Correct Answer: C

**QUESTION 4**

You are designing a health monitoring strategy for an ASP.NET Web application. The Web application must raise failure events to correspond with key business process failures.

You need to recommend an approach for ensuring that failure events can be consumed by the ASP.NET Health Monitoring framework.

Which two actions should you recommend? (Each correct answer presents part of the solution. Choose two.)

- A. In the Web.config file, add an entry to the healthMonitoring/providers collection for the custom event class.
- B. Create a custom event class derived from the WebFailureAuditEvent class.
- C. Create a custom event class derived from the WebErrorEvent class.
- D. In the Web.config file, add an entry to the healthMonitoring/eventMappings collection for the custom event class.

Correct Answer: CD

QUESTION 5

You are designing an internal Web application. You have the following requirements:

Use an existing data layer built on the Entity Framework

Ensure that additional Entity Framework entities can be supported without additional coding.

You need to design the Web application so that users can add, edit, and delete data.

Which approach should you recommend?

- A.
Create an ASP.NET Dynamic Data project.
- B.
Create an ASP.NET MVC 2 project and use the Entity Framework data layer as your model.
- C.
Create an ASP.NET Web Forms application and set the Data Source Id for each Grid View to an Entity Data Source control.
- D.
Create an ASP.NET Web Forms application and set the Data Source Id for each Grid View to an Object Data Source control.

Correct Answer: A
