QUESTION 1

You need to meet the high availability and business continuity requirements.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Create a primary database on the Standard service tier.	
Configure a secondary database to use a different region than the primary database is deployed to.	
Configure a secondary database to use the same server that the primary database is deployed to.	
In the Azure management portal, enable geo-replication.	
Configure a secondary database to use the same region that the primary database is deployed to.	
Create a primary database on the Premium service tier.	

Correct Answer:

Actions	Answer Area
	Create a primary database on the Standard service tier.
Configure a secondary database to use the same server that the primary database is deployed to.	In the Azure management portal, enable geo-replication.
Configure a secondary database to use the same region that the primary database is deployed to.	Configure a secondary database to use a different region than the primary database is deployed to.
Create a primary database on the Premium service tier.	

QUESTION 2

You deploy an application as a cloud service to Azure. The application contains a web role to convert temperatures between Celsius and Fahrenheit.

The application does not correctly convert temperatures. You must use Microsoft Visual Studio to determine why the application does not correctly convert temperatures.

You need to debug the source code in Azure.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Attach the debugger to the role instance of the cloud service.	
Publish the application.	
In the Microsoft Azure Publish Settings dialog, set the build configuration to Release and enable the remote debugger for all roles.	
In the Windows Azure Publish Settings dialog, set the build configuration to Debug .	
In the Microsoft Azure Publish Settings dialog, enable Remote Desktop for cloud configuration and enable the remote debugger for all roles.	

Correct Answer:

Actions	Answer Area
	Publish the application.
	In the Microsoft Azure Publish Settings dialog, set the build configuration to Release and enable the remote debugger for all roles.
In the Windows Azure Publish Settings dialog, set the build configuration to Debug .	Attach the debugger to the role instance of the cloud service.
In the Microsoft Azure Publish Settings dialog, enable Remote Desktop for cloud configuration and enable the remote debugger for all roles.	

QUESTION 3

You need to create a web job that performs post processing for reviews. What should you do?

- A. Rename the post-processing file to action.py, and add a file named settings.job that includes the following content:{"is_in_place": false}
- B. Rename the post-processing file to run.exe, and add a file named settings.job that includes the following content:{"is_in_place": false}

C. Rename the post-processing file to run.py, and add a file named settings.job that includes the following content:{"is_in_place": true)

D. Rename the post-processing file to action.exe, and add a file named settings.job that includes the following content:{"is_in_place": true)

Correct Answer: C

Explanation

QUESTION 4

Your company network includes users in multiple directories. You plan to publish a software-as-a-service application named SaasApp1 to Azure Active Directory.

You need to ensure that all users can access SaasApp1.

What should you do?

- A. Configure the Federation Metadata URL
- B. Register the application as a web application.
- C. Configure the application as a multi-tenant.
- D. Register the application as a native client application.

Correct Answer: C

QUESTION 5

Your company works with trusted partners. These partners upload files into a storage account that you control.

Partners must be able to create, read, and write files. Partners must NOT be allowed to see files from other partners. You generate a shared access signature (SAS) for each partner.

You create the following Windows PowerShell script to create a new container for each partner. Line numbers are included for reference only.

```

01 $containerName = "partner123files"
02 $key = (Get-AzureStorageKey -StorageAccountName $storageAccountName).Primary
03 $context = New-AzureStorageContext -StorageAccountName $storageAccountName `
    -StorageAccountKey $key
04
05 New-AzureStorageContainer -Name $containerName -Context $context
06 $filepath = "welcome.txt"
07 $blobname = "welcome.txt"
08 Set-AzureStorageBlobContent -Container $containerName -File "$filepath" `
    -Blob $blobname -Context $context -Properties @{"ContentType"="text/plain"}
09 $oneYearFromNow = (Get-Date).AddYears(1)
10 $sasToken = New-AzureStorageContainerSASToken -Name $containerName `
    -Permission 'rwdl' -ExpiryTime $oneYearFromNow -Context $context
11 $sasBlobUri = New-AzureStorageBlobSASToken -Container $containerName `
    -Permission 'r' -ExpiryTime $oneYearFromNow -Context $context `
    -FullUri -Blob $blobname

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

Answer Area

Yes **No**

Running the command at line 10 a second time invalidates the previously generated SAS token.

Web browsers can open the welcome.txt file directly by using the full URI and the SAS token for the file.

If the primary storage key is regenerated, the SAS token is still valid until its expiration date is reached.

Correct Answer:

Answer Area

Yes **No**

Running the command at line 10 a second time invalidates the previously generated SAS token.

Web browsers can open the welcome.txt file directly by using the full URI and the SAS token for the file.

If the primary storage key is regenerated, the SAS token is still valid until its expiration date is reached.
