QUESTION 1

You need to encrypt a media file.

Which type of encryption should you use?

- A. secure token service
- B. envelope
- C. PlayReady
- D. storage

Correct Answer: C

QUESTION 2

You manage an Azure environment for a company. The environment has over 25,000 licensed users and 100 mission-critical applications.

You need to recommend a solution that provides advanced endpoint threat detection and remediation strategies.

What should you recommend?

- A. Azure Active Directory (Azure AD) authentication
- B. Azure Active Directory (Azure AD) Identity Protection
- C. Azure Active Directory Federation Services (AD FS)
- D. Microsoft Identity Manager
- E. Azure Active Directory (Azure AD) Connect

Correct Answer: B

Azure Active Directory Identity Protection is a feature of the Azure AD Premium P2 edition that enables you to: Detect potential vulnerabilities affecting your organization's identities Configure automated responses to detected suspicious actions that are related to your organization's identities Investigate suspicious incidents and take appropriate action to resolve them

QUESTION 3

You manage a cloud service that has one Web Role instance, and several Worker Role instances. The cloud service has multiple tiers. Different groups develop and maintain each tier.

You need to ensure that the cloud service remains highly available and responsive when the Worker Roles are performing extensive work.

What should you do?

- A. Create an availability set for each tier of the application.
- B. Implement auto-scaling for the Worker Roles.
- C. Create a resource group.
- D. Create an availability set with two or more virtual machines.

Correct Answer: B

QUESTION 4

You need to prevent security attacks based on the Tabular Data Stream (TDS) Protocol.

Solution: Isolate connection to Azure web Apps and Azure SQL Database instances by implementing a virtual network.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 5

You are implementing the new security requirements for the WGBCreditCruncher app.

You need to explain the security process flow to another developer. You start by navigating to the web app as it is presented to the user.

Which five actions must be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

OAuth creates an ID token and returns it to the application's HTTPS Reply URL.

Azure AD validates the Reply URL against the registered Reply URL that was configured in the Azure Portal.

The browser sends a GET to the AzureAD authorization endpoint to request an ID token to include the client ID and reply URL in the query parameters.

The user initiates a sign in to the app by clicking a sign in link.

The JavaScript client extracts the token from the response.

Azure AD creates an ID token and returns it to the application's HTTPS Reply URL.

The browser sends a POST to the Azure AD authorization endpoint to request a claim token to include the client ID and reply URL in the query parameters.

Answer Area

Pass4Lead.com

Correct Answer:

Actions

OAuth creates an ID token and returns it to the application's HTTPS Reply URL.

The browser sends a POST to the Azure AD authorization endpoint to request a claim token to include the client ID and reply URL in the query parameters.

Answer Area

The user initiates a sign in to the app by clicking a sign in link.

The browser sends a GET to the AzureAD authorization endpoint to request an ID token to include the client ID and reply URL in the query parameters.

Azure AD validates the Reply URL against the registered Reply URL that was configured in the Azure Portal.

Azure AD creates an ID token and returns it to the application's HTTPS Reply URL.

The JavaScript client extracts the token from the response.
