QUESTION 5

You are migrating an existing Windows application to an Azure virtual machine (VM) that runs Windows.

The application generates, stores, and retrieves a large number of small files. The performance of the application directly corresponds to the speed that these files can be loaded and saved.

You need to maximize application performance and storage efficiency.

Which are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Premium Storage virtual hard disk (VHD)

B. Standard Storage virtual hard disk (VHD)

C. Standard Storage Blob storage

D. Premium Storage Blob storage

Correct Answer: AD

Azure Premium Storage delivers high-performance, low-latency disk support for virtual machines (VMs) with input/output (I/O)-intensive workloads. VM disks that use Premium Storage store data on solid-state drives (SSDs). To take advantage of the speed and performance of premium storage disks, you can migrate existing VM disks to Premium Storage.
