-  **800,000+** Satisfied Customers

**QUESTION 1**

You have multiple SharePoint 2010 sites based on the same site definition. You need to plan a strategy to update the property value for a Web Part specified in the site definition for all existing sites. You must accomplish this with a minimum of developer hours.

Which strategy should you recommend?

- A. Update the site definition to specify the new property for the Web Part and deploy it through a feature to each of the sites.
- B. Create a delegate control with the updated value and deploy it through a feature to each of the sites.
- C. Copy an update to the Web Part into the global assembly cache (GAC) and perform an IISReset.
- D. Use a PowerShell script to iterate through the sites and update the property.

Correct Answer: D

---

**QUESTION 2**

You are using SharePoint 2010 to design a site at your company. All employees need to have permission to fill out a new form. When an employee submits the form, the request should be saved as an item in a custom list. You have the following requirements:

.For security reasons, employees must only be able to view their own requests. .Employees must not be able to view requests that other employees have submitted. .Company managers must have permission to view every request submitted.

Which approach should you recommend?

- A. Create a new workflow that updates the owner of the list item to the username of the employee who submitted the form.
- B. Create and schedule a SharePoint timer job that sets item level security on each item in the list.
- C. Create an event receiver that sets the appropriate item level security. Add the event receiver to the ItemAdded event in the list.
- D. Create an event receiver that sets the appropriate list level security. Add the event receiver to the ItemUpdated event in the list.

Correct Answer: C

---

**QUESTION 3**

You are designing a SharePoint 2010 information architecture plan for a client that specifies the mechanics of

implementing content type change control. The requirements for the change control plan specify that:

- .Site managers can create site-specific content types based on the content types in the parent site.
- .Content types must not be overwritten when changes are made to parent site content types.
- .Site managers can change child site content types.

You need to specify a content type change control plan that meets all these requirements.

Which approach should you recommend?

- A. Direct the site manager to explicitly set the read-only property of the content type to true. Direct the site collection manager to make the specified change required in the child site to the content type at the site collection level.
- B. Direct the site manager to explicitly set the read-only property of the content type to true. Perform a push-down operation from the parent site to overwrite the required changes to the read-only content types in all the child sites.
- C. Define the content type as read-only at the child site level. Direct the site manager to explicitly set the read-only property of the content type to false to make changes to the content type. Then change the read-only property to true.
- D. Define the content type as sealed. Direct the site manager to explicitly set the sealed property of the content type to false to make changes to the content type. Then change the sealed property of the content type to true.

Correct Answer: C

---

#### QUESTION 4

Your company has a SharePoint 2010 farm that has one Web application with multiple site collections. Your team needs to meet the following requirements:

- .Certain individuals need to have the "Full Control" permission set on every site collection in the Web application.
- .Permissions must be set in a central location and should effect all current and future site collections.

Which approach should you recommend?

- A. Add users to the local administrators group on the server.
- B. Add users to the Site Owners group in each site collection.
- C. Create a user policy for the Web application in Central Administration.
- D. Create a group policy in the Active Directory domain to which the SharePoint users authenticate.

Correct Answer: C

---

#### QUESTION 5

You are designing an external binary large object (BLOB) store provider by implementing the ISPEExternalBinaryProvider interface. The farm has existing sites that contain content.

Your implementation has been verified to be working correctly. You need to ensure that content within existing sites is moved using the external BLOB store provider. You also must ensure that the solution does not require further custom coding.

Which approach should you recommend?

- A. Perform a backup and restore on each site.
- B. Perform a backup and restore of each content database.
- C. Perform a backup and restore on each site collection.
- D. Perform a backup and restore of the configuration database.

Correct Answer: C
