### QUESTION 1

You need to perform an offline defragmentation of an Active Directory database.

Which four actions should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

The screenshot shows a drag-and-drop interface. On the left, under 'List of Actions', there are six text boxes containing the following actions: 'Compact ntds.dit.', 'Move the ntds.dit file to %WINDIR%\NTDS.', 'Restart the domain controller in Safe Mode.', 'Start the Active Directory Domain Services service.', 'Copy the ntds.dit file to %WINDIR%\SYSVOL.', and 'Stop the Active Directory Domain Services service.'. On the right, under 'Answer Area', there is an empty space for placing the selected actions. A watermark 'www.Pass4Lead.com' is visible across the interface.

Correct Answer:

The screenshot shows the same interface as above, but with four actions moved to the 'Answer Area' in the correct sequence: 'Stop the Active Directory Domain Services service.', 'Compact ntds.dit.', 'Move the ntds.dit file to %WINDIR%\NTDS.', and 'Start the Active Directory Domain Services service.'. The 'List of Actions' now only contains 'Restart the domain controller in Safe Mode.' and 'Copy the ntds.dit file to %WINDIR%\SYSVOL.'. A watermark 'www.Pass4Lead.com' is visible across the interface.

Reference: <http://technet.microsoft.com/en-us/library/cc794920.aspx>

Compact the database file to a local directory or remote shared folder, as follows:

1. Open a Command Prompt as an administrator.
2. At the command prompt, type the following command, and then press ENTER: net stop ntds
3. Type Y to agree to stop additional services, and then press ENTER.
4. At the command prompt, type ntdsutil, and then press ENTER.
5. At the ntdsutil prompt, type activate instance ntds, and then press ENTER.
6. At the ntdsutil prompt, type files, and then press ENTER.
7. If you are compacting the database to a local drive, at the file maintenance: prompt, type compact to :\ (where :\ is the path to a location on the local computer), and then press ENTER.

8. If defragmentation completes successfully, type quit, and then press ENTER to quit the file maintenance: prompt. Type quit again, and then press ENTER to quit Ntdsutil.exe. (...)

Note You should make a copy of the existing Ntds.dit file if at all possible, even if you have to store that copy on a secured network drive. If the compaction of the database does not work properly, you can then easily restore the database by copying it back to the original location. Do not delete the copy of the Ntds.dit file until you have at least verified that the domain controller starts properly. If space allows, you can rename the original Ntds.dit file to preserve it. Avoid overwriting the original Ntds.dit file.

9. Manually copy the compacted database file to the original location, as follows: copy

"&lt;temporaryDrive>:\ntds.dit" "&lt;originalDrive>:\

\ntds.dit"

Ntdsutil provides the correct paths to the temporary and original locations of the Ntds.dit file.

(...)

10.Restart AD DS.

## QUESTION 2

You are the network administrator for the ABC Company.

Your network consists of two DNS servers named DNS1 and DNS2.

The users who are configured to use DNS2 complain because they are unable to connect to Internet websites.

The following table shows the configuration of both servers:

DNS1	DNS2
_msdcs.contoso.com	(root)
contoso.com	_msdcs.contoso.com
	contoso.com

The users connected to DNS2 need to be able to access the Internet.

What needs to be done?

- A. Build a new Active Directory Integrated zone on DNS2.
- B. Delete the .(root) zone from DNS2 and configure Conditional forwarding on DNS2.
- C. Delete the current cache.dns file.
- D. Update your cache.dns file and root hints.

Correct Answer: B

<http://support.microsoft.com/kb/298148>

How To Remove the Root Zone (Dot Zone)

When you install DNS on a Windows 2000 server that does not have a connection to the Internet, the zone for the domain is created and a root zone, also known as a dot zone, is also created. This root zone may prevent access to the

Internet for DNS and for clients of the DNS. If there is a root zone, there are no other zones other than those that are listed with DNS, and you cannot configure forwarders or root hint servers. For these reasons, you may have to remove the

root zone.

---

### QUESTION 3

Your network contains an Active Directory forest named contoso.com. The forest contains a single domain. The domain contains two domain controllers named DC1 and DC2 that run Windows Server 2008 R2. DC1 is configured as a global catalog server.

You need to configure DC2 as the only global catalog server in the forest. The solution must maintain DC1 in the domain.

What should you do?

- A. Run the dsadd.exe command
- B. Run the nltest.exe command.
- C. Run the Set-AdDomain cmdlet.
- D. Run the dsmove.exe command.
- E. Run the dcpromo.exe command.
- F. Run the Move-AdDirectoryServer cmdlet.
- G. Use the Active Directory Schema snap-in.
- H. Use the Active Directory Users and Computers console.

Correct Answer: H

---

### QUESTION 4

Your network consists of a single Active Directory domain. All domain controllers run Windows Server 2008 R2.

You need to reset the Directory Services Restore Mode (DSRM) password on a domain controller.

What tool should you use?

- A. Active Directory Users and Computers snap-in
- B. ntdsutil

C. Local Users and Groups snap-in

D. dsmod

Correct Answer: B

<http://technet.microsoft.com/en-us/library/cc753343%28v=ws.10%29.aspx> Ntdsutil

Ntdsutil.exe is a command-line tool that provides management facilities for Active Directory Domain Services (AD DS) and Active Directory Lightweight Directory Services (AD LDS). You can use the ntdsutil commands to perform database

maintenance of AD DS, manage and control single master operations, and remove metadata left behind by domain controllers that were removed from the network without being properly uninstalled. This tool is intended for use by

experienced administrators.

..

Commands set DSRM password - Resets the Directory Services Restore Mode (DSRM) administrator password.

Further information:

<http://technet.microsoft.com/en-us/library/cc754363%28v=ws.10%29.aspx> Set DSRM password

Resets the Directory Services Restore Mode (DSRM) password on a domain controller. At the Reset DSRM Administrator Password: prompt, type any of the parameters listed under "Syntax." This is a subcommand of Ntdsutil and Dsmgmt.

Ntdsutil and Dsmgmt are command-line tools that are built into Windows Server 2008 and Windows Server 2008 R2. Ntdsutil is available if you have the Active Directory Domain Services (AD DS) or Active Directory Lightweight Directory

Services (AD LDS) server role installed.

Dsmgmt is available if you have the AD LDS server role installed. These tools are also available if you install the Active Directory Domain Services Tools that are part of the Remote Server Administration Tools (RSAT).

---

## QUESTION 5

Your network contains an Active Directory forest named contoso.com. The forest contains four child domains named east.contoso.com, west.contoso.com, south.contoso.com, and north.contoso.com.

You need to create four new groups in the forest root domain. The groups must be configured as shown in the following table.

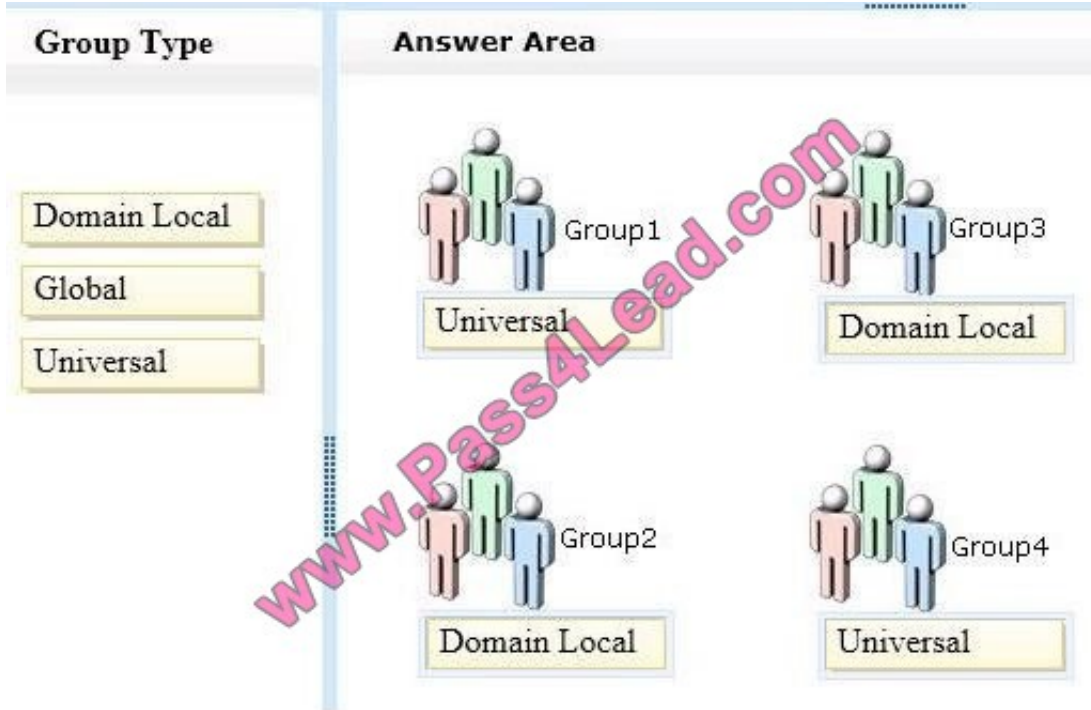

Group name	Group members	Group requirement
Group1	A universal group from east.contoso.com	Visible in all domains
Group2	A domain local group from contoso.com A universal group from north.contoso.com	Only visible in the contoso.com domain
Group3	User accounts from contoso.com	Only visible in the contoso.com domain
Group4	A global group from south.contoso.com A universal group from west.contoso.com	Visible in all domains

What should you do? To answer, drag the appropriate group type to the correct group name in the answer area.

Select and Place:

The interface shows a 'Group Type' column on the left with three buttons: 'Domain Local', 'Global', and 'Universal'. The 'Answer Area' on the right contains four group icons labeled Group1, Group2, Group3, and Group4. Each icon has a 'Group Type' label below it. A vertical line separates the two areas.
