QUESTION 1

You need to design the deployment for the retail locations.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Create a password replication policy for each retail location.
- B. Place a DNS and WINS server in the Jakarta office.
- C. Place a global catalog server in each retail location.
- D. Place a read-only domain controller (RODC) in each retail location.
- E. Place a read-only domain controller (RODC) in the Jakarta office.
- F. Place a DNS and WINS server in each retail location.
- G. Create a new AD DS site and place each read-only domain controller (RODC) in the new site.

Correct Answer: AD

QUESTION 2

You need to recommend an IP address range for the museum's planned subsidiary in France. Which IP address range should you recommend?

- A. 10.10.96.0/19
- B. 10.10.160.0/20
- C. 10.10.160.0/22
- D. 10.10.192.0/21

Correct Answer: A

The IP addresses for the campuses are assigned as shown in the following table.

Campus location	Network address	Subnet mask
U.S.	10.10.0.0	255.255.224.0
India	10.10.64.0	255.255.224.0
China	10.10.128.0	255.255.192.0
WAN links	10.10.224.0	255.255.255.0

 Till 10.10.95.255/19
so we start of 10.10.96.0/19
and will end of 10.10.127.255

QUESTION 3

You are evaluating the process of raising the functional level of the contoso.com forest to Windows Server 2008 R2. You need to recommend which changes to the network must be implemented before raising the forest functional level.

What should you recommend?

- A. Upgrade all domain controllers in the lucernepublshing.com forest to Windows Server 2008 R2.
- B. Upgrade all domain controllers in the contoso.com forest to Windows Server 2008 R2.
- C. Upgrade all client computers to Windows Vista.
- D. In the contoso.com forest, install a new domain controller that runs Windows Server 2008 R2. Transfer the schema master role and the domain naming master role to the new domain controller.
- E. Upgrade all servers to Windows Server 2003 R2.

Correct Answer: B

QUESTION 4

Your network consists of one Active Directory forest that contains two domains named domain1 and domain2. The functional level of the forest is Windows Server 2003. All domain controllers run Windows Server 2003. The relevant portion of the network is configured as shown in the exhibit. (Click the Exhibit button.)

All domain controllers for domain1 are in the hub sites. All domain controllers for domain2 are in the spoke sites.

The Bridge all site links option is disabled.

You plan to deploy a read-only domain controller (RODC) in SiteH for domain2.

You need to prepare the environment for the installation of the RODC.

What should you do?

- A. Upgrade DC7 to Windows Server 2008.
- B. Upgrade DC2 to Windows Server 2008.
- C. Lower site link costs between the satellite sites (SiteF, SiteG, and SiteH) and SiteB to 80.
- D. Enable the Bridge all site links option. Create a BH-AB site link bridge that includes the B-H and A-B site links.

Correct Answer: A

QUESTION 5

Your company uses Windows Server Update Services (WSUS) to deploy Microsoft software updates to computers in the Madrid and Munich offices. You set a deadline for packages to be installed one week after they are approved. An update from Microsoft requires the user to consent to a new license agreement. You perform a successful manual installation of the update on client computers in the Munich office.

The update fails to deploy on Madrid client computers when using WSUS. You need to ensure that the update is deployed to all client computers.

Which actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area, and arrange them in the correct order. (Use only actions that apply.)

Select and Place:

Select the software update package.

Assign the update to the All Computers group.

Remove the deadline from the software update.

Approve the update in the WSUS console.

Approve the update in the WSUS console and set the update assignment to **Install**.

Use a Group Policy object (GPO) to deploy the update manually by using the **msixexec /u** switch before the update package.

Correct Answer:

Select the software update package.

Assign the update to the All Computers group.

Approve the update in the WSUS console and set the update assignment to **Install**.

Remove the deadline from the software update.

Approve the update in the WSUS console.

Use a Group Policy object (GPO) to deploy the update manually by using the **msixexec /u** switch before the update package.
