**QUESTION 1**

You are evaluating raising the functional level of the contoso.com forest to Windows Server 2008 R2.

You need to recommend which changes to the network must be implemented before raising the functional level of the forest. You want to achieve this goal by using the minimum amount of administrative effort.

What should you recommend?

- A. Upgrade all of the domain controllers in both forests to Windows Server 2008 R2.
- B. Upgrade all of the domain controllers in the contoso.com forest to Windows Server 2008 R2.
- C. In the contoso.com forest and the lucernepublishing.com forest, install a new domain controller that runs Windows Server 2008 R2.
- D. In the contoso.com forest, install a new domain controller that runs Windows Server 2008 R2. Transfer the schema master role and the domain naming master role to the new domain controller.

Correct Answer: B

Existing Environment**Active Directory Environment**

The network contains two Active Directory forests named lucernepublishing.com and contoso.com. The forests are configured as shown in the exhibit. (Click the **Case Study Exhibits** button.)

All of the domains in both of the forests contain domain controllers that run Windows Server 2003 R2. All of the domain controllers are configured as DNS servers.

QUESTION 2

Your network contains servers that run Windows Server 2008 R2 and client computers that run Windows 7.

All network routers support IPsec connections. Client computers and servers use IPsec to connect through network routers.

You have two servers named Server1 and Server2. Server1 has Active Directory Certificate Services (AD CS) installed and is configured as a certification authority (CA). Server2 runs Internet Information Services (IIS).

You need to recommend a certificate solution for the network routers. The solution must meet the following requirements:

?Use the Simple Certificate Enrollment Protocol (SCEP). ?Enable the routers to automatically request certificates.

What should you recommend implementing?

- A. Certification authority Web enrollment services on Server2
- B. Network Device Enrollment Service on Server2
- C. Online Responder service on Server1

D. Subordinate CA on Server1

Correct Answer: B

To recommend a certificate solution for the network routers that would enable the routers to automatically request certificates and that would use Simple Certificate Enrollment Protocol (SCEP), you need to implement Network Device

Enrollment Service on Server2.

The Network Device Enrollment Service allows routers and other network devices to obtain certificates based on the Simple Certificate Enrollment Protocol (SCEP) from Cisco Systems Inc.

QUESTION 3

Your network contains a server that runs Windows Server 2008. You install Microsoft Office 2007 on the server. You need to recommend an update management solution for the server. The solution must ensure that all operating system, security updates, drivers, and Office updates are installed on the server.

What should you recommend?

- A. Use Windows Update.
- B. Use Microsoft Update.
- C. Run the Security Configuration Wizard (SCW).
- D. Run the Microsoft Baseline Security Analyzer (MBSA).

Correct Answer: B

To install all security updates of the operating system, drivers, and Office updates on the server, you need to use Microsoft Update. You need to use Microsoft Update because you need Office updates also besides OS updates. You can get updates for Windows, Office and other Microsoft applications from Microsoft Update. You cannot use Windows Update because it allows you to get only operating System updates. Reference: Microsoft Update

QUESTION 4

You work as an IT professional in an international company which is named Contoso. Your major job is to translate business goals into technology decisions and plan mid-range to long- term strategies. And you are experienced in network

infrastructure, security policy and business continuity. In your company, you are responsible for infrastructure design and global configuration changes.

One Active Directory domain is contained by your network. Windows Server 2008 is run by all servers. You are required to implement a storage management policy for failover clustering that storage area network (SAN)-based storage is

utilized. The requirements listed below should be supported by the solution.

The solution should sustain disk space usage informationQuota tracking by folder or by volumeEmail notifications when their quota limits are exceeded. Which action should be performed to achieve the goal?

- A. To achieve the goal, the Storage Manager should be installed and configured for SANs.
- B. To achieve the goal, the Reliability and Performance Monitor should be utilized.
- C. To achieve the goal, the File Server Resource Manager (FSRM) should be utilized.
- D. To achieve the goal, NTFS file system disk quotas should be created and deployed.

Correct Answer: C

QUESTION 5

You want to perform maintenance task on a domain controller but you want the services of DNS and DHCP available. Servers must have the less down time possible. What should you do?

- A. Run the ntdsutil.
- B. Disable Netlogon service.
- C. Stop the NTDS service.
- D. Run the DC in the Directory Services Restore mode.

Correct Answer: C
