QUESTION 1

You work as the network administrator at ABC.com. The network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. Most of the client computers now run Windows 7

Professional having recently been upgraded from Windows XP Professional. However, some of the portable client computers still run Windows XP Professional.

ABC management has asked you to implement a VPN server to enable users to access company network resources from home. To this end, you install a server named ABC-VPN1 that runs Windows Server 2008. ABC-VPN1 will be

configured as a VPN server to provide remote access to the network.

You need to ensure that Windows 7 and Windows XP client computers can establish a VPN connection with ABC-VPN1. The VPN must be as secure as possible. How should you configure the VPN?

- A. Configure ABC-VPN1 to accept PPTP connections.
- B. Configure ABC-VPN1 to accept L2TP connections.
- C. Configure ABC-VPN1 to use IKEv2.
- D. Configure ABC-VPN1 to accept DirectAccess connections.

Correct Answer: B

QUESTION 2

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. All client computers run Windows 7 Enterprise.

All client computers in the network use IPv6 IP addresses that are configured automatically.

How can you identify the IPv6 address of a specific computer?

- A. Log in to the computer and run the Net View command.
- B. Log in to the computer, double click on the network connection and click Details.
- C. Log in to the computer and run the Systeminfo command.
- D. From a remote computer, run the Net View command.

Correct Answer: B

QUESTION 3

You have a computer that runs Windows 7. Multiple users log on to your computer. You enable auditing on a folder stored on your computer. You need to ensure that each access to the folder is logged. What should you do?

- A. Start the Problem Steps Recorder.

- B. From Event Viewer, modify the properties of the Security log.
- C. From the local Group Policy, configure the Audit object access setting.
- D. From the local Group Policy, configure the Audit directory service Access setting.

Correct Answer: C

QUESTION 4

All client computers on your company network run Windows 7 and are members of a Windows Server 2008 R2 domain. The RandD department staff are local administrators on their computers and are members of the RandD global security group. A new version of a business software application is available on the network. You plan to apply an AppLocker security policy to the RandD group. You need to ensure that members of the RandD group are not allowed to upgrade the software. What should you do?

- A. Create an Audit only restriction based on the version of the software.
- B. Create an Audit only restriction based on the publisher of the software.
- C. Create an Enforce rule restriction based on the version of the software.
- D. Create an Enforce rule restriction based on the publisher of the software.

Correct Answer: C

QUESTION 5

Your network contains a wired network and a wireless network. Users report that they experience intermittent problems accessing network resources when they connect to the internal wireless network. You discover that an unsecured rogue wireless access point uses the same Service Set Identifier (SSID) as the internal wireless network. You need to ensure that the users only connect to the internal wireless network. What should you do?

- A. Configure a Windows Connect Now Group Policy.
- B. Configure a Wireless Network (IEEE 802.11) Policy.
- C. Delete the rogue network from the Network and Sharing Center on each computer.
- D. Create a Connection Manager Administration Kit (CMAK) profile and deploy it to all users.

Correct Answer: B
