### QUESTION 1

You are planning a zero-touch deployment of Windows 7 Enterprise to client computers on your corporate network.

Each client computer has three available boot methods:

You have the following requirements:

You need to design a zero-touch deployment strategy that supports the requirements.

What should you do?

- A. Remove USB media and local hard disk from the available boot methods
- B. Remove USB media and network from the available boot methods
- C. Set network as the first boot method, USB media as the second boot method, and local hard disk as the third boot method
- D. Set USB media as the first boot method and local hard disk as the second boot method. Remove network from the available boot methods

Correct Answer: C

hints: zero-touch deployment of Windows 7 Enterprise to client computers on your corporate network so, set network as 1st boot.

### QUESTION 2

Your company has two network segments. The core network segment is where centralized management is performed. The high-security network segment is an isolated network. A firewall between the core network segment and the high-security network segment limits network communication between the segments.

These network segments are shown in the following diagram.

Your company plans to deploy Windows 7 to all client computers.

You need to manage activation for client computers that are located in the high-security network segment.

What should you do?

- A. Deploy the Key Management Service (KMS) in the core network segment.
- B. Deploy the Key Management Service (KMS) in the high-security network segment.
- C. Install the Volume Activation Management Tool (VAMT) in the core network segment.
- D. Install the Volume Activation Management Tool (VAMT) in the high-security network segment.

Correct Answer: D

Key Management Service (KMS) requires a count of 25 or higher from the KMS host to activate itself.

refer to <http://technet.microsoft.com/en-us/library/ee939272.aspx> There is a firewall blocking, (VAMT) should setup at high-security network.

---

### QUESTION 3

Your company has client computers that run Windows XP Professional.

You are planning to install Windows 7 Enterprise on the existing client computers.

You have the following requirements:

You need to design a user state migration strategy that supports the requirements.

What should you do?

- A. Use a hard-link migration store.
- B. Perform an offline migration by using Windows.old.
- C. Use a compressed migration store.
- D. Perform an offline migration by using Windows PE.

Correct Answer: C

Compressed migration

The compressed migration store is a single image file that contains all files being migrated and a catalog file.

This image file is often encrypted and protected with a password, and cannot be navigated with Windows Explorer.

---

### QUESTION 4

You are the desktop architect for an enterprise organization with computers that run Windows 7.

You need to create a Group Policy object (GPO) to prevent Windows Explorer from starting until all logon scripts have finished.

Which setting should you select? To answer, select the appropriate setting in the work area.

Hot Area:

Answer Area

Scripts

Select an item to view its description.

Setting	State	Comment
Run legacy logon scripts hidden	Not configured	No
Run logoff scripts visible	Not configured	No
Run logon scripts synchronously	Not configured	No
Run logon scripts visible	Not configured	No
Run Windows PowerShell scripts first at user logon, logoff	Not configured	No

Correct Answer:

Answer Area

Scripts

Select an item to view its description.

Setting	State	Comment
Run legacy logon scripts hidden	Not configured	No
Run logoff scripts visible	Not configured	No
Run logon scripts synchronously	Not configured	No
Run logon scripts visible	Not configured	No
Run Windows PowerShell scripts first at user logon, logoff	Not configured	No

### QUESTION 5

Your network contains an Active Directory domain. What should you do next?

- A. Create a computer collection that contains the computer account for computer1.
- B. Create a distribution group that contains the computer account for computer1.
- C. Create a child domain and move the computer account for computer1 to the child domain.
- D. Create a security group that contains the computer account for computer1.

Correct Answer: B

Original answer is B but some ppl believe is A. so i put it as A

----- CheddaBob from United States - Apr 18 2012, 8:40 PM  
Report Spam @looller Answer is A. I took the test late December. I used a different dump that had the correct answer.

----- looller from United States - Apr 17 2012, 9:42 PM

Report Spam I think the answer is "A" here? anyone agree? answer given is B
