QUESTION 1

You plan to purchase new windows 8 tablets for you company network.

You need to ensure that tablet users are able to use the windows 8 Snap feature.

Which hardware specifications should you meet in choosing tablets?

- A. monitor and video adapter that support a minimum screen resolution of 1366 x 768
- B. monitor that supports at least three simultaneous touches
- C. monitor that supports at least five simultaneous touches
- D. monitor and video adapter that support a minimum screen resolution of 1024 x 768

Correct Answer: A

Install and Upgrade to Windows 8 (14%) Chris <http://windows.microsoft.com/en-US/windows-8/snap-apps#1TC=t1>

QUESTION 2

You administer Windows 8 Pro client computers in your company network.

You need to configure a backup and recovery solution that meets the following requirements:

Recovers the system if it doesn't start.

Recovers the system if the hard drive fails.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Turn on File History.
- B. Create a storage space.
- C. Configure system protection.
- D. Create a system repair disk.
- E. Create a system image backup.

Correct Answer: DE

*

In the event that you are unable to start Windows or wish to restore your hard drives to a previous backup you can use the System Image Recovery program from the Windows 7 or Windows 8 Recovery Environment.

*

You should create a system repair disk, which can be used to boot your PC and restore it using the system image backup, in the event of a hard drive issue or other hardware failure. Incorrect:

C: System protection is a feature that regularly creates and saves information about your computer's system files and settings. System protection also saves previous versions of files that you've modified. It saves these files in restore points, which are created just before significant system events, such as the installation of a program or device driver. They're also created automatically once every seven days if no other restore points were created in the previous seven days, but you can create restore points manually at any time.

QUESTION 3

You install Windows 8 on a desktop computer and install a third-party desktop app. The computer runs optimally until you install another third-party desktop app.

You need to remove only the most recently installed third-party desktop app.

You start the computer from a system repair disk.

Which troubleshooting option should you use?

- A. System Image Recovery
- B. Remove everything and install Windows
- C. System Restore
- D. Refresh your PC without affecting your files

Correct Answer: C

QUESTION 4

A company has client computers that run Windows 8.

The company implements the following security requirements:

All client computers must use two-factor authentication. At least one authentication method must include exactly four characters or gestures.

You need to choose authentication methods that comply with the security requirements.

Which two authentication methods should you choose? (Each correct answer presents part of the solution. Choose two.)

- A. PIN
- B. Biometric authentication
- C. Picture password
- D. Microsoft account

Correct Answer: AB

Something the user knows: PIN (4 digits)

One might be tempted to think the photo for the picture password is something the User has.

But it is something the User knows, too:

He knows how to draw the gestures (maximum 3 gestures supported with picture password), and it is no physical object (like a token, smart card ...) The MS Account is too something the user knows. So the answer must be Biometric

authentication. Two-factor authentication requires the use of two of the three authentication factors:

Something the user knows (e.g., password, PIN); Something the user has (physical Object) (e.g., ATM card, smart card); and Something the user is (e.g., biometric characteristic, such as a fingerprint). The factors are identified in the

standards and regulations for access to U.S. Federal Government systems.

QUESTION 5

A company plans to deploy Windows 8.1 to 100 client computers. Each client computer has 8 GB of memory.

You have the following requirements:

Ensure that the operating system fully utilizes the available memory. Ensure that the operating system can be activated by using a Key Management Service (KMS) client setup key.

Minimize the operating system space requirements.

You need to identify the appropriate edition of Windows 8.1 to install on the client computers.

Which edition should you install?

- A. Windows 8.1 Enterprise 32-bit
- B. Windows 8.1 64-bit
- C. Windows 8.1 Pro 32-bit
- D. Windows 8.1 Enterprise 64-bit
- E. Windows 8.1 Pro 64-bit
- F. Windows 8.1 32-bit

Correct Answer: D
