QUESTION 1

You support desktop computers and tablets that run Windows 8 Enterprise. All of the computers are able to connect to your company network from the Internet by using DirectAccess.

Your company wants to deploy a new application to the tablets. The deployment solution must meet the following requirements:

The application is not accessible if a user is working offline.

The application is stored on an internal solid-state drive (SSD) on the tablets.

The application is isolated from other applications.

The application uses the least amount of disk space.

You need to deploy the new application to the tablets.

What should you do?

A. Deploy the application as an Application Virtualization (App-V) package. Install the App-V 4.6 client on the tablets.

B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets.

C. Install the application on a local drive on the tablets.

D. Install the application in a Windows To Go workspace.

E. Install Hyper-V on tablets. Install the application on a virtual machine.

F. Publish the application to Windows Store.

G. Install the application within a separate Windows 8 installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot.

H. Install the application within a separate Windows 8 installation in a VHDX file. Configure tablets with dual boot.

Correct Answer: A

Microsoft Application Virtualization (App-V) enables enterprises to meet the needs of users and IT by empowering anywhere productivity and accelerated application deployment. App-V provides anywhere user access to applications that available on any authorized device without application installs. Virtual applications and user settings are preserved whether users are online or offline. App-V increases business agility through faster application deployment and updates with no user interruptions. It minimizes conflicts between applications, allowing enterprises to reduce application compatibility testing time. App-V together with Microsoft User State Virtualization (USV) provides users with a consistent experience and reliable access to applications and business data, no matter their location and connection to the Internet. http://www.microsoft.com/en-us/windows/enterprise/products-and-technologies/virtualization/app- v.aspx

QUESTION 2

You administer a computer that runs Windows 8 Pro.

You need to create a backup copy of the computer system drive. The backup copy must support a complete system drive restore to another computer.

What should you do?

A. Run the bcdedit /export command.

B. Create a system restore point.

C. Create a system recovery drive.

D. Perfom a backup to a shared folder by using the wbadmin command with the -allcritical switch.

Correct Answer: D

-allCritical Specifies that all critical volumes (volumes that contain operating system\\'s state) be included in the backups. This parameter is useful if you are creating a backup for bare metal recovery. It should be used only when -backupTargets specified, otherwise the command will fail. Can be used with the -include option.

QUESTION 3

You are a systems administrator for your company. The company has employees who work remotely by using a virtual private network (VPN) connection from their computers, which run Windows 8 Pro. These employees use an application to access the company intranet database servers. The company recently decided to distribute the latest version of the application through using a public cloud.

Some users report that every time they try to download the application by using Internet Explorer, they receive a warning message that indicates the application could harm their computer.

You need to recommend a solution that prevents this warning message from appearing, without compromising the security protection of the computers.

What should you do?

A. Publish the application through an intranet web site.

B. Publish the application to Windows Store.

C. Digitally sign the application by using a trusted certificate, and then update the default App Package Deployment policy on all computers.

D. Obtain a public certificate for the web server, and then configure the web site to use SSL.

E. Change the default Applications Control Policies on the client computers.

F. Change the default Software Restriction Policies on the client computers.

G. Instruct employees to disable the SmartScreen Filter from within the Internet Explorer settings.

H. Publish the application through a public file transfer protocol (FTP) site.

Correct Answer: C

QUESTION 4

You have Windows 8.1 Pro client computers.

You need to recommend a solution to roll back the Windows Defender engine and the malware signature files on the computers. The solution must minimize administrative effort.

What should you include in the recommendation?

A. the Program and Features Control Panel item

B. the Reset your PC push-button reset feature

C. System Restore points

D. the Refresh your PC push-button reset feature

Correct Answer: C

Restore System to a Previous State Using Restore Point Restoring your Windows operating system to a previous state is nothing new, but this feature can be very handy and time saving. For example, if you installed a new application or driver and your system starts to behave abnormally, or if your computer is infected by a virus from one unintentional mouse click on a link, wherever the case may be, you may want to go back to a previous state, say yesterday. You can refresh or reset your system, but system restore is your best bet for this kind of scenarios.

QUESTION 5

You administer Windows 8 Pro and Windows RT tablets for your company. Your company network includes a Windows Server 2012 domain and Microsoft Exchange 2010 with ActiveSync and Outlook Web Access.

Users will be using the tablets outside of the corporate network.

The Microsoft Exchange ActiveSync policy is configured to require an alphanumeric password.

You need to ensure an alphanumeric password is required on all Windows 8 tablets. What should you do?

A. Set up New Partnership in Sync Center.

B. Create a user profile by using a Microsoft account.

C. From the Mail app, add the user\\'s Exchange account.

D. From Sync your Settings, set Password to Off.

Correct Answer: C
