QUESTION 1

You are a systems administrator for your company. The company has employees who work remotely by using a virtual private network (VPN) connection from their computers, which run Windows 8 Pro. These employees use an application to access the company intranet database servers. The company recently decided to distribute the latest version of the application through using a public cloud.

Some users report that every time they try to download the application by using Internet Explorer, they receive a warning message that indicates the application could harm their computer.

You need to recommend a solution that prevents this warning message from appearing, without compromising the security protection of the computers.

What should you do?

- A. Publish the application through an intranet web site.
- B. Publish the application to Windows Store.
- C. Digitally sign the application by using a trusted certificate, and then update the default App Package Deployment policy on all computers.
- D. Obtain a public certificate for the web server, and then configure the web site to use SSL.
- E. Change the default Applications Control Policies on the client computers.
- F. Change the default Software Restriction Policies on the client computers.
- G. Instruct employees to disable the SmartScreen Filter from within the Internet Explorer settings.
- H. Publish the application through a public file transfer protocol (FTP) site.

Correct Answer: C

QUESTION 2

You have the disk configuration shown in the following exhibit. (Click the Exhibit button.)

The screenshot shows the Windows Disk Management console. At the top, a table lists the volumes. Below this, the details for each disk are shown, including their layout, type, file system, status, capacity, and free space.

Volume	Layout	Type	File System	Status	Capacity	Free Spa...	% Free
(A:)	Simple	Basic		Healthy (A...)	22.92 GB	22.92 GB	100 %
(C:)	Simple	Basic	NTFS	Healthy (B...)	111.69 GB	30.54 GB	27 %
(D:)	Simple	Basic	NTFS	Healthy (S...)	100 MB	64 MB	64 %
Data (E:)	Simple	Basic	NTFS	Healthy (P...)	908.59 GB	236.17 GB	26 %

Disk	Layout	Type	File System	Status	Capacity	Free Space	% Free
Disk 0	(D:)	Basic	100 MB NTFS	Healthy (System, Activ)	(C:)	111.69 GB NTFS	Healthy (Boot, Crash Dump, Primary Partition)
Disk 1	Data (E:)	Basic	908.59 GB NTFS	Healthy (Page File, Primary Partition)	22.92 GB	Healthy (Active, Recovery Partition)	
Disk 2	500.00 GB	Unknown	500.00 GB	Unallocated			
Disk 3	500.00 GB	Unknown	500.00 GB	Unallocated			

Legend: ■ Unallocated ■ Primary partition

To answer, complete each statement according to the information presented in the exhibit. Each correct selection is worth one point.

Hot Area:

You cannot create the spanned volume until disk 2 and disk 3 are first ...

formattec.	<input type="checkbox"/>
initialized	<input type="checkbox"/>
partitioned.	<input type="checkbox"/>

Disks 2 and 3 are both ... disks.

external	<input type="checkbox"/>
fixed	<input type="checkbox"/>
virtual	<input type="checkbox"/>

Correct Answer:

You cannot create the spanned volume until disk 2 and disk 3 are first ...

formattec.	<input type="checkbox"/>
initialized	<input checked="" type="checkbox"/>
partitioned.	<input type="checkbox"/>

Disks 2 and 3 are both ... disks.

external	<input type="checkbox"/>
fixed	<input type="checkbox"/>
virtual	<input checked="" type="checkbox"/>

QUESTION 3

You are a systems administrator of a small branch office. Computers in the office are joined to a Windows 8 HomeGroup. The HomeGroup includes one shared printer and several shared folders.

You join a new computer to the HomeGroup and try to access the HomeGroup shared folders. You discover that the shared folders are unavailable, and you receive an error message that indicates the password is incorrect.

You need to reconfigure the new computer in order to access the HomeGroup resources.

What should you do?

- A. Change the HomeGroup password and re-enter it on the computers of all members of the HomeGroup.
- B. Change the default sharing configuration for the shared folders on the HomeGroup computers.
- C. Reset your account password to match the HomeGroup password.
- D. Adjust the time settings on the new computer to match the time settings of the HomeGroup computers.

Correct Answer: D

You may receive a misleading error message when trying to join a Windows 7 Homegroup, when the computer's date

and time does not match the date/time of system that owns the homegroup Symptoms When joining a system to a homegroup, you may receive the following error message "The password is incorrect", even though you have typed the password correctly. Cause This can be caused by a difference in the Date and Time settings on the computer trying to join the homegroup, and not an invalid password. If the date/time of the computer joining a homegroup is greater than 24 hours apart from the date/time of the system that owns the homegroup, this will cause the error. Resolution Adjust the date/time settings on the system joining the homegroup, to match the system that owns the homegroup, and then try to join again. <http://support.microsoft.com/kb/2002121>

QUESTION 4

You support computers that run Windows 8 Pro and are members of an Active Directory domain. Several desktop computers are located in a subnet that is protected by a firewall. The firewall allows incoming TCP connections only to ports 80 and 443.

You want to manage disk volumes on the desktop computers from your computer, which is located outside the protected subnet.

You need to configure the network to support the required remote administration access.

What should you do?

- A. Run the winrm quickconfig command on the desktop computers.
- B. Run the winrm quickconfig command on your computer.
- C. Enable Remote Desktop on the desktop computers.
- D. Install Remote Server Administration Tools (RSAT) on your computer.

Correct Answer: A

QUESTION 5

You are a systems administrator for your company. The company has employees who work remotely by using a virtual private network (VPN) connection from their computers, which run Windows 8.1 Pro. These employees use an application

to access the company intranet database servers. The company recently decided to distribute the latest version of the application through using a public cloud.

Some users report that every time they try to download the application by using Internet Explorer, they receive a warning message that indicates the application could harm their computer.

You need to recommend a solution that prevents this warning message from appearing, without compromising the security protection of the computers.

What should you do?

- A. Instruct employees to disable the SmartScreen Filter from within the Internet Explorer settings.
- B. Publish the application through a public file transfer protocol (FTP) site.
- C. Digitally sign the application by using a trusted certificate, and then update the default App Package Deployment

policy on all computers.

D. Change the default Software Restriction Policies on the client computers.

Correct Answer: D

Administrators can use software restriction policies for the following tasks: Define what is trusted code

Design a flexible Group Policy for regulating scripts, executable files, and ActiveX controls
