QUESTION 1

Which software should you install on Server2 to support the planned changes?

- A. SQL Server 2012 Express
- B. WDS
- C. Windows Assessment and Deployment Kit (Windows ADK)
- D. Microsoft .NET Framework 3.5

Correct Answer: C

QUESTION 2

You maintain a base operating system image for your company. The image does not contain hardware-specific drivers. The image is distributed to the desktop support team, which is responsible for maintaining a driver repository on a file share named Share1.

You have a client computer named Client1 that runs Windows 8.1 Enterprise. Client1 will be used as the reference computer for the next version of the base image.

You plan to generalize Client1, capture an image of Client1, and then distribute the image to the desktop support team.

You need to configure a Sysprep answer file to ensure that the next time the image starts, device drivers from Share1 are added to the local driver repository. The solution must ensure that the drivers are added without entering the Out-of-Box-Experience (OOBE) phase.

Which configuration pass in the unattended file should you configure?

- A. specialize
- B. auditSystem
- C. generalize
- D. windowsPE

Correct Answer: D

QUESTION 3

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. You have a client computer named Computer1 that runs Windows 8.1.

You need to identify which property of Computer1 you can use to create a device object in Configuration Manager. What

should you identify?

- A. an IPv6 address
- B. an IPv4 address
- C. a Configuration Manager UUID
- D. a MAC address

Correct Answer: D

QUESTION 4

HOTSPOT

You need to identify which actions must be performed to distribute the boot images from Server1 to Server101, once Server101 is configured as a distribution point.

What should you identify? To answer, select the appropriate server to perform each action in the answer area.

Hot Area:

Answer Area

Run extractcontent.exe:	<input type="text" value="Server1"/> <input type="text" value="Server101"/>
Run the Distribute Content Wizard:	<input type="text" value="Server1"/> <input type="text" value="Server101"/>
Run the Create Prestaged Content File Wizard:	<input type="text" value="Server1"/> <input type="text" value="Server101"/>
Modify the Distribution Settings of the boot images:	<input type="text" value="Server1"/> <input type="text" value="Server101"/>
Enable the distribution point for the prestaged content:	<input type="text" value="Server1"/> <input type="text" value="Server101"/>

Correct Answer:

Answer Area

Run extractcontent.exe: Server1 Server101

Run the Distribute Content Wizard: Server1 Server101

Run the Create Prestaged Content File Wizard: Server1 Server101

Modify the Distribution Settings of the boot images: Server1 Server101

Enable the distribution point for the prestaged content: Server1 Server101

QUESTION 5

DRAG DROP

Your network contains one Active Directory domain named contoso.com. The domain contains the servers configured as shown in the following table.

Server name	Role
Server1	Microsoft System Center 2012 R2 Configuration Manager site server
Server2	DNS server providing external name resolution for contoso.com
Server3	Enterprise certification authority (CA)

All contoso.com clients are allowed access to cloud-based distribution points.

You need to deploy a cloud-based distribution point.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- On Server1, export the CER files.
- On Server2, create an alias (CNAME) record.
- On Server2, create a text (TXT) record.
- On Server1, request two certificates for server authentication.
- On Server1, export the PFX files.
- On Server1, run the Create Cloud Distribution Point Wizard.

Answer Area

Correct Answer:

Actions

- On Server1, export the CER files.
- On Server2, create a text (TXT) record.

Answer Area

- On Server1, request two certificates for server authentication.
- On Server1, export the PFX files.
- On Server1, run the Create Cloud Distribution Point Wizard.
- On Server2, create an alias (CNAME) record.
