QUESTION 1

Your company has multiple branch offices.

The network contains an Active Directory domain named contoso.com.

In one of the branch offices, a new technician is hired to add computers to the domain.

After successfully joining multiple computers to the domain, the technician fails to join any more computers to the domain.

You need to ensure that the technician can join an unlimited number of computers to the domain.

What should you do?

- A. Configure the technician's user account as a manager service account.
- B. Run the Set-ADComputer cmdlet.
- C. Modify the Security settings of the Computers container.
- D. Add the technician to the Domain Computers group.

Correct Answer: C

Users who have the Create Account Objects privilege for the Computers container can create an unlimited number of computer accounts in the domain. You can grant this privilege by accessing the Advanced Security settings on the Security Tab of the Computer container via Active Directory Users And Computers or the Active Directory Administrative Center.

QUESTION 2

Your network contains an Active Directory domain named contoso.com.

You have an application named App1 that is deployed to all the client computers in the domain. App1 writes a registry value named LocalStorage on all the client computers.

You need to delete the LocalStorage registry value from all the client computers in the domain that have less than 100 GB of free disk space on their system volume.

What should you do?

- A. Configure Software Settings in a Group Policy object (GPO) and enable a WMI filter.
- B. Configure a Group Policy setting to modify the security of the LocalStorage registry value.
- C. Create an administrative template file that contains the LocalStorage registry setting, and then add the administrative template to a Group Policy object (GPO).

D. Configure a Group Policy preference that uses item-level targeting.

Correct Answer: D

In Windows Server 2008 Microsoft introduced a Group Policy extension, named Group Policy Preferences (GPP). GPP that includes registry settings, allows you to add, remove or modify key values. References: <https://theitbros.com/add-modify-and-delete-registry-keys-using-group-policy/>

QUESTION 3

Your network contains an Active Directory forest named contoso.com.

A partner company has a forest named fabrikam.com. Each forest contains one domain.

You need to provide access for a group named Research in fabrikam.com to resources in contoso.com. The solution must use the principle of least privilege.

What should you do?

A. Create an external trust from fabrikam.com to contoso.com. Enable Active Directory split permissions in fabrikam.com.

B. Create an external trust from contoso.com to fabrikam.com. Enable Active Directory split permissions in contoso.com.

C. Create a one-way forest trust from contoso.com to fabrikam.com that uses selective authentication.

D. Create a one-way forest trust from fabrikam.com to contoso.com that uses selective authentication.

Correct Answer: C

QUESTION 4

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

Your network contains an Active Directory domain named contoso.com.

The domain functional level is Windows Server 2012 R2.

Your company hires a new security administrator to manage sensitive user data.

You create a user account named Security1 for the security administrator.

You need to ensure that the password for Security1 has at least 12 characters and is modified every 10 days. The solution must apply to Security1 only.

Which tool should you use?

A. Dsadd quota

- B. Dsmod
- C. Active Directory Administrative Center
- D. Dsacls
- E. Dsamain
- F. Active Directory Users and Computers
- G. Ntdsutil
- H. Group Policy Management Console

Correct Answer: C

QUESTION 5

Your network contains an Active Directory domain named adatum.com. The domain contains the servers configured as shown in the following table:

Server name	Configuration
Server1	Domain controller
Server2	Network controller
Server3	Network Policy Server (NPS) server
Server4	Active Directory Federation Services (AD FS) server
Server5	Host Guardian Service (HSG) server

You have a server named Server6 in the perimeter network.

Each server has the local users show in the following table.

User Name	Member of
User1	Administrators
User2	Power Users
User3	Network Configuration Operators
User4	Cryptographic Operators

The domain contains the users shown in the following table.

User Name	Member of
User1	Domain Admins
User2	Server Operators
User3	Network Configuration Operators
User4	Cryptographic Operators

You install a Web Application Proxy on Server6.

You need to configure the Web Application proxy on Server6. The solution must use the principle of least privilege.

Which account should you specify in the Web Application Proxy Configuration Wizard? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

	▼
Adatum\	
Server1\	
Server2\	
Server3\	
Server4\	
Server5\	

	▼
User1	
User2	
User3	
User4	

Correct Answer:

Answer Area

	▼
Adatum\	
Server1\	
Server2\	
Server3\	
Server4\	
Server5\	

	▼
User1	
User2	
User3	
User4	

The user account used to configure the web application proxy must have local Administrator permission on the WAP server(s), and have access to an account that have local Administrator permissions on the AD FS servers.
