QUESTION 1

You are using rxPredict for a logistic regression model.

You need to obtain prediction standard errors and confidence intervals.

Which R code segment should you use? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Values	Answer Area
<input type="text" value="confidence"/>	<pre>model <- <input type="text" value="Value"/> (default ~ year + creditScore + yearsEmploy + ccDebt, data = trainingDataFileName, blocksPerRead = 2, verbose = 1, reportProgress=2, covCoef= <input type="text" value="Value"/>) rxPredict(model, data = targetDataFileName, outData = targetDataFileName, computeStdErr = <input type="text" value="Value"/> , interval = "<input type="text" value="Value"/> ", overwrite=TRUE)</pre>
<input type="text" value="FALSE"/>	
<input type="text" value="glm"/>	
<input type="text" value="none"/>	
<input type="text" value="rxLinMod"/>	
<input type="text" value="rxLogit"/>	
<input type="text" value="TRUE"/>	

Correct Answer:

Values	Answer Area
<input type="text" value="confidence"/>	<pre>model <- <input type="text" value="rxLogit"/> (default ~ year + creditScore + yearsEmploy + ccDebt, data = trainingDataFileName, blocksPerRead = 2, verbose = 1, reportProgress=2, covCoef= <input type="text" value="TRUE"/>) rxPredict(model, data = targetDataFileName, outData = targetDataFileName, computeStdErr = <input type="text" value="TRUE"/> , interval = "<input type="text" value="confidence"/> ", overwrite=TRUE)</pre>
<input type="text" value="FALSE"/>	
<input type="text" value="glm"/>	
<input type="text" value="none"/>	
<input type="text" value="rxLinMod"/>	
<input type="text" value="rxLogit"/>	
<input type="text" value="TRUE"/>	

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use `dplyrXdf`, and you discover that after you exit the session, the output files that were created were deleted.

You need to prevent the files from being deleted.

Solution: You remove all instances of the `file.remove` method.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

You plan to read data from an Oracle database table and to store the data in the file system for later processing by `dplyrXdf`. The size of the data is larger than the memory on the server to be used for modelling.

You need to ensure that the data can be processed by `dplyrXdf` in the least amount of time possible.

How should you transfer the data from the Oracle database?

A. Define a data source to the Oracle database server by using `RxOdbcData`. Use `rxImport` to save the data to a comma-separated values (CSV) file.

B. Use the RODBC library, connect to the Oracle database server by using `odbcConnect`, and then use `rxDataStep` to export the data to a comma-separated values (CSV) file.

C. Define a data source to the Oracle database server by using `RxOdbcData`, and then use `rxImport` to save the data to an XDF file.

D. Use the RODBC library, connect to the Oracle database server by using `odbcConnect`, and then use `rxSplit` to save the data to multiple comma-separated values (CSV) file.

Correct Answer: C

QUESTION 4

You are running a large logistic regression for 1,000 feature variables by using the `LoisticRegression()` function in the `MicrosoftML` package. All of the predictor variables are numeric.

Currently, you specify the input variables separately by using the following formula.

Outcome ~ Feature000 + Feature001 + Feature002 + ... + Feature999

You discover that it takes 20 minutes to estimate each model.

You need to reduce the amount of time required to estimate each model without losing any information in the predictors.

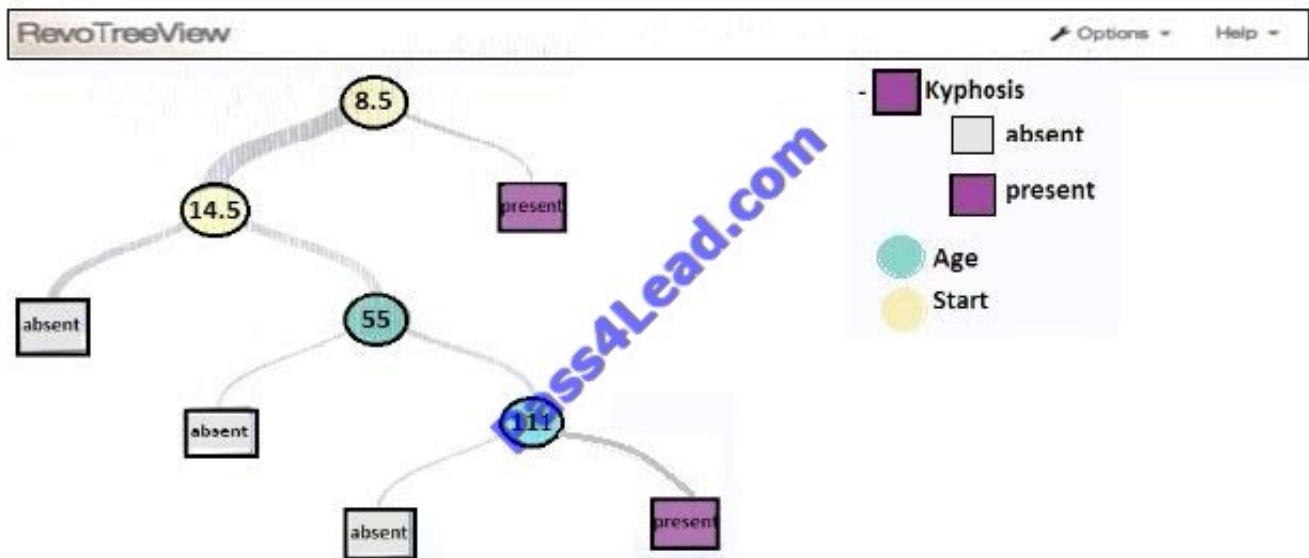

What should you do?

- A. Use `stepControl()` to perform stepwise regression to limit the number of variables that contribute to the model.
- B. Use `selectFeatures()` to select the features that provide the most information about the outcome variable.
- C. Use `princomp()` on the correlation matrix of Features, and then use only the first 100 principle components to reduce the number of input variables.
- D. Use `concat()` to create a single array variable named Features, and then specify a new formula named Outcome ~ Features.

Correct Answer: D

QUESTION 5

You perform an analysis that produces the decision tree shown in the exhibit. (Click the Exhibit button.)

How many leaf nodes are there on the tree?

- A. 2
- B. 3
- C. 5
- D. 7

Correct Answer: C
