100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Microsoft  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure ML experiment that contains an intermediate dataset.

You need to explore data from the intermediate dataset by using Jupyter.

Solution: You add a web service input to retrieve the data for the data source, and then add the Execute R Script module.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

---

**QUESTION 2**

You need to use R code in a Transact-SQL statement to merge the repeating values 1 through 6 with Col1 in a table.

Which statement should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

## Answer Area

```

execute
  'Insert #MyData SELECT* FROM #MyData1, #MyData2'
  sp_execute_external_script
  sp_execute_remote
  sp_executesql

@language = N'R'
, @script = N'
  df1 <- as.data.frame( array(1:6) );

  df2 <- as.data.frame( c(
    Input_Data_1
    InputDataSet
    InputDataTable
  ), df1 );

  OutputDataSet <- df2'

, @input_data_1 = N' SELECT [Col1] from #MyData;
WITH RESULT SETS (( [Col2] int not null, [Col3] int not null ));

```

Correct Answer:

## Answer Area

```

execute
  'Insert #MyData SELECT* FROM #MyData1, #MyData2'
  sp_execute_external_script
  sp_execute_remote
  sp_executesql

@language = N'R'
, @script = N'
  df1 <- as.data.frame( array(1:6) );

  df2 <- as.data.frame( c(
    Input_Data_1
    InputDataSet
    InputDataTable
  ), df1 );

  OutputDataSet <- df2'

, @input_data_1 = N' SELECT [Col1] from #MyData;
WITH RESULT SETS (( [Col2] int not null, [Col3] int not null ));

```

### QUESTION 3

You plan to use Azure Machine Learning to develop a predictive model. You plan to include an Execute Python Script module. What capability does the module provide?

- A. Outputting a file to a network location.
- B. Performing interactive debugging of a Python script.
- C. Saving the results of a Python script run in a Machine Learning environment to a local file.
- D. Visualizing univariate and multivariate summaries by using Python code.

Correct Answer: D

References: <https://docs.microsoft.com/en-us/azure/machine-learning/studio/execute-python-scripts>

---

### QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario You plan to create a predictive analytics solution for credit risk assessment and fraud prediction in Azure Machine Learning. The Machine Learning workspace for the solution will be shared with other users in your organization. You will add assets to projects and conduct experiments in the workspace.

The experiments will be used for training models that will be published to provide scoring from web services.

The experiment for fraud prediction will use Machine Learning modules and APIs to train the models and will predict probabilities in an Apache Hadoop ecosystem.

End of repeated scenario.

You plan to share the Machine Learning workspace with the other users.

You are evaluating whether to assign the User role or the Owner role to several of the users.

Which three actions can be performed by the users who are assigned the User role? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Create, open, modify, and delete datasets.
- B. Create, open, modify, and delete experiments.
- C. Invite users to the workspace.
- D. Delete users from the workspace.
- E. Create, open, modify, and delete web services.

F. Access notebooks.

Correct Answer: CDF

---

#### QUESTION 5

You are building an Azure Machine Learning experiment.

You need to transform 47 numeric columns into a set of 10 linearly uncorrelated features.

Which module should you add to the experiment?

A. Principal Component Analysis

B. K-Means Clustering

C. Normalize Data

D. Group Data into Bins

Correct Answer: A
