QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft Excel workbook that is saved to Microsoft SharePoint Online. The workbook contains several Power View sheets.

You need to recreate the Power View sheets as reports in the Power BI service.

Solution: Copy the workbook to Microsoft OneDrive for Business. From Excel, click Publish to Power BI, and then click Upload

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

You have an on-premises Power BI Report Server.

You plan to create a report in Power BI Desktop and publish the report to the report server.

Which data source should the report use?

A. Microsoft Azure SQL Database

B. a Microsoft SQL Server database

C. a Microsoft SQL Server Analysis Services (SSAS) database

D. Microsoft Excel

Correct Answer: C

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Power BI model that contains two tables named Sales and Date. Sales contains four columns named TotalCost, DueDate, ShipDate, and OrderDate. Date contains one column named Date.

The tables have the following relationships:

The active relationship is on Sales[DueDate].

You need to create measures to count the number of orders by [ShipDate] and the orders by [OrderDate]. You must meet the goal without duplicating data or loading additional data.

Solution: You create measures that use the CALCULATE, COUNT, and FILTER DAX functions.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 4

You have a Power BI dashboard that displays different visualizations of company sales.

You enable QandA on the dashboard.

You need to provide users with sample questions that they can ask when using QandA.

Which settings should you modify from the Power BI Settings?

A. Subscriptions

B. Dashboards

C. Datasets

D. Workbooks

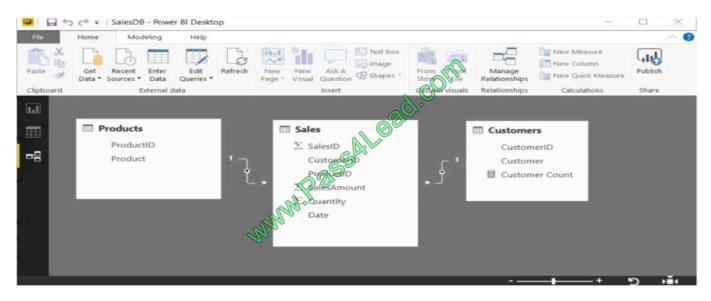

Correct Answer: C

QUESTION 5

You have a Power BI Desktop project that has the model shown in the exhibit. (Click the Exhibit tab.)

Customer Count is a measure that uses the countRows function to calculate the number of customers.

You create a table visualization that displays ProductID, Product, and Customer Count.

When you view the table, you discover that Customer Count always displays the total number of customers instead of the number of customers who purchased the product.

You need to ensure that the table visualization displays the number of customers who purchased each product.

What should you do?

- A. Modify the Customer Count measure to use the count function.
- B. Modify the table relationship between the Customers table and the Sales table to use a Cross filter direction of Both.
- C. Modify the table relationship between the Products table and the Sales table to use a Cross filter direction of Both
- D. Modify the Customer Count measure to use the countx function.

Correct Answer: B
