### QUESTION 1

You have a failover cluster named Cluster1 that contains four Hyper-V hosts. Cluster1 hosts 20 virtual machines.

You deploy a new failover cluster named Cluster2.

You plan to replicate the virtual machines from Cluster1 to Cluster2.

You need to recommend which actions must be performed on Cluster2 for the planned deployment.

Which three actions should you recommend?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Install the Hyper-V server role.	
Deploy Microsoft System Center 2012 Virtual Machine Manager (VMM).	
Create replicas of the virtual machines.	
Create a snapshot of each virtual machine.	
Install the Hyper-V Replica Broker cluster role.	

Correct Answer:

Actions	Answer Area
	Install the Hyper-V server role.
Deploy Microsoft System Center 2012 Virtual Machine Manager (VMM).	Install the Hyper-V Replica Broker cluster role.
	Create replicas of the virtual machines.
Create a snapshot of each virtual machine.	

### QUESTION 2

Your network contains an Active Directory forest named contoso.com. The forest contains multiple servers that run Windows Server 2012. The network contains 1,000 client computers that run Windows 7. Two hundred remote users have

laptop computers and only work from home.

The network does not provide remote access to users.

You need to recommend a monitoring solution to meet the following requirements:

Generate a list of updates that are applied successfully to all computers.

Minimize the amount of bandwidth used to download updates.

An administrator must approve the installation of an update on any client computer.

What should you include in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Microsoft Asset Inventory Service (AIS)
- B. Windows InTune
- C. Windows Server Update Services (WSUS)
- D. Active Directory Federation Services (AD FS)
- E. Microsoft System Center 2012 Service Manager

Correct Answer: ABC

---

### QUESTION 3

You need to implement a solution for DNS replication. Which cmdlets should you run?

- A. SetDnsServer and InvokeDnsServerZoneSign
- B. ConvertToDnsServerPrimaryZone and RegisterDnsServerDirectoryPartition
- C. UnRegisterDnsServerDirectoryPartition and AddDnsServerForwarder
- D. SetDnsServerDnsSecZoneSetting and InvokeDnsServerZoneSign

Correct Answer: C

---

### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains multiple servers that are configured as Hyper-V hosts. You plan to implement four virtual machines. The virtual machines will be configured as shown in the following table.

Virtual machine name	Configuration
VM1	Will host several shared folders that are accessed by users on the network.
VM2	Will be migrated to a host on the public cloud by using live migration.
VM3	Will run processes that must only be able to connect to shared resources on other virtual machines on the local Hyper-V host.
VM4	Will run processes that must only be able to connect to shared resources on the local Hyper-V host.

You need to identify which network must be added to each virtual machine.

Which network types should you identify?

To answer, drag the appropriate Network Type to the correct virtual machine in the answer area. Each Network Type may be used once, more than once, or not at all. Additionally, you may need to drag the SP1it bar between panes or scroll to

view content.

Select and Place:

The screenshot shows a drag-and-drop interface. On the left, under the heading "Network Types", there are three yellow buttons: "Private", "Internal", and "External". On the right, under the heading "Answer Area", there is a table with four rows, one for each VM. Each row has a "Network" button. The rows are: VM1, VM2, VM3, and VM4. A watermark "www.Pass4Lead.com" is overlaid diagonally across the interface.

Correct Answer:

Network Types

- Private
- Internal
- External

Answer Area

VM1	External
VM2	External
VM3	Private
VM4	Internal

**QUESTION 5**

Your network contains four servers. The servers are configured as shown in the following table.

Server name	Nodes	Platform
Cluster1	Five nodes	VMware ESX 4.0
Cluster2	Ten nodes	Citrix XenServer
Cluster3	Six nodes	Hyper-V
Cluster4	Three nodes	Hyper-V

You manage all of the servers and all of the clusters by using Microsoft System Center 2012 Virtual Machine Manager (VMM).

You plan to implement Dynamic Optimization for the virtual machines. You need to recommend a configuration for the planned implementation.

What should you recommend?

- A. Dynamic Optimization on Cluster3 and Cluster4 only Virtual machines that are balanced across the clusters
- B. Dynamic Optimization on all of the clusters Virtual machines that are balanced across the nodes in the clusters
- C. Dynamic Optimization on all of the clusters Virtual machines that are balanced across the clusters
- D. Dynamic Optimization on Cluster1 and Cluster2 only Virtual machines that are balanced across the nodes in the clusters

Correct Answer: B
