QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the Windows Deployment Services server role and the

Microsoft Deployment Toolkit (MDT) installed. Server2 has Windows Server Update Services (WSUS) installed.

You have an image of Windows 8 that is deployed by using MDT 2012. You plan to deploy a new hardware device to all new client computers. The new hardware requires additional device drivers that are unavailable from Microsoft Update.

You need to add the hardware drivers to the Windows 8 image.

What should you do?

- A. From Server1, add the new drivers to Deployment Workbench, and then create a task sequence.
- B. From Server1, install the Windows Internal Database, and then copy the drivers to C:\Windows\System32\DriverStore\Temp.
- C. From Server1, mount the image, and then run the Add-WindowsPackage cmdlet.
- D. From Server2, copy the drivers to the Inventory folder.

Correct Answer: C

* Add-WindowsPackage Adds a single .cab or .msu file to a Windows image

QUESTION 2

You need to configure security for the HR users to meet the application requirements. What should you configure in Group Policy Management Editor?

- A. Security Options
- B. Restricted Groups
- C. Public Key Policies
- D. Application Control Policies

Correct Answer: D

QUESTION 3

You need to implement a solution to deploy patches to all of the client computers. The solution must meet the technical requirements. What should you do first?

- A. Install the Windows Server Update Services Tools feature on SRV-PRI.

- B. Install the Configuration Manager console on SRV-WSUS.
- C. Install the Configuration Manager console on SRV-DP.
- D. Install the Windows Server Update Services Tools feature on SRV-DP.

Correct Answer: A

The company identifies the following technical requirements:

-Configuration Manager must be used to deploy operating systems and patches.

-

An existing virtual machine that runs Windows 8 must be used as the reference computer for the deployment of new client computers.

-

To troubleshoot installation issues, technicians must be able to open a Command Prompt window during the deployment of Windows 8 to the new client computers.

There is already a WSUS (SRV-WSUS) server present in our network.

We can continue to use it by integrating it with SCCM or replace it by transferring metadata and updates to our future Software Update Point on the SCCM primary site server.

In order to achieve this WSUS SDK / Wsus management console -connected to the wsus is a prerequisite on the primary Site server.

2. You need a SUP at every primary site - unlike other WSUS-based implementations, SCCM requires one at every site to function.

QUESTION 4

You need to implement a software inventory solution for the A. Datum network. The solution must meet the technical requirements. What should you implement?

- A. The Microsoft Deployment Toolkit (MDT).
- B. The Microsoft Assessment and Planning (MAP) Toolkit.
- C. The Windows Assessment and Deployment Kit (Windows ADK).
- D. Windows Intune.

Correct Answer: B

Intune requires an agent installed which is a direct conflict with the technical requirement to not install additional software

(<http://www.microsoft.com/sam/en/us/intune.aspx>)

MAP is an agent-less inventory service (<http://www.microsoft.com/sam/en/us/map.aspx>)

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. A network technician installs the Remote Desktop Session Host role service on Server1.

The technician cannot manage Remote Desktop Services (RDS) by using Server Manager. You need to ensure that you can manage RDS by using Server Manager on Server1.

What should you do first?

- A. Install the Remote Desktop Connection Broker role service.
- B. Run an RDS scenario-based installation.
- C. Add Server1 to the RDS Management Servers group.
- D. Install the Remote Desktop Services Tools feature-

Correct Answer: B
