**QUESTION 1**

Your network contains an Active Directory domain named contoso.com. The network contains a server named Server1 that has the Hyper-V server role installed. Server1 hosts a virtual machine named VM1. You deploy a new standalone server named Server2. You install the Hyper-V server role on Server2. Another administrator named Admin1 plans to create a replica of VM1 on Server2. You need to ensure that Admin1 can configure Server2 to receive a replica of VM1. To which group should you add Admin1?

- A. Server Operators
- B. Domain Admins
- C. Hyper-V Administrators
- D. Replicator

Correct Answer: C

---

**QUESTION 2**

You need to secure the RD Web Access servers. The solution must meet the technical requirements. What should you do?

- A. From Server Manager, edit the deployment properties.
- B. From the Certificates console, import the custom certificate to the personal certificates store of the local computer.
- C. From Server Manager, edit the collection properties.
- D. From the Certificates console, import the custom certificate to the Remote Desktop certificates store of the local computer.

Correct Answer: A

---

**QUESTION 3**

You need to recommend an application deployment method for App2 that meets the application requirements. Which method should you recommend?

- A. Group Policy software installation.
- B. A RemoteApp program.
- C. A Microsoft Application Virtualization (App-V) package.
- D. A Client Hyper-V virtual machine.

Correct Answer: B

App-V maintains local resources on the client whereas RemoteApp utilizes resources on the backend RDS Server.

The network data sent to the client is also different, App-V has two feature packs that contain all binaries of the streamed app. Remote Apps utilizes RDP, so only the picture information, mouse, keyboard etc are transmitted.

Actually they can be combined, applications can be streamed to a RDS server and published to the client via RemoteApp. For more information, please see

<http://blogs.msdn.com/b/rds/archive/2009/10/14/whitepaperrelease-applicationvirtualization-4-5-for-terminal-services.aspx>

For more information about App-V, I suggest that you post to the App-V forum:

<http://social.technet.microsoft.com/Forums/en-US/category/appvirtualization>

Hope the information is helpful for your work.

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that is a part of a Remote Desktops Services (RDS) deployment.

The computer account of Server1 is in an organizational unit (OU) named Servers. All of the client computers are in an OU named OU1.

Server1 has a session collection named Collection1 that contains multiple RemoteApp programs.

You need to prevent users from using printer redirection when they connect to Server1 by using the Remote Desktop client.

What should you do?

- A. Link a Group Policy object (GPO) to OU1. Configure the User Configuration settings of the GPO.
- B. Link a Group Policy object (GPO) to Servers. Configure the Computer Configuration settings of the GPO.
- C. Link a Group Policy object (GPO) to Servers. Configure the User Configuration settings of the GPO.
- D. Link a Group Policy object (GPO) to the Domain Controllers OU. Configure the Computer Configuration settings of the GPO.

Correct Answer: B

---

#### QUESTION 5

Your network contains an Active Directory domain named contoso.com. The network contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the Remote Desktop Visualization Host role service installed. Server2 has the Remote Desktop Web Access role service installed.

The network contains a Virtual Desktop Infrastructure (VDI).

You plan to use an existing virtual machine as the new pooled virtual desktop base image for Standard Deployment.

The virtual machine has the following configurations:

Uses a static IP address

Is a member of a workgroup

Runs the Windows 8 operation system

You need to ensure that you can use the virtual machine as the template virtual machine for the VDI deployment.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Connect the virtual machine to the Remote Desktop Services (RDS) virtual network.
- B. Run sysprep.exe on the virtual machine.
- C. Join the virtual machine to the domain.
- D. On the virtual machine, import a Secure Sockets Layer (SSL) certificate.
- E. On Server1, import a Secure Sockets Layer (SSL) certificate.

Correct Answer: AB
