**QUESTION 1**

This question requires that you evaluate the underlined text to determine if it is correct.

The bubble sort algorithm steps through the list to be sorted, comparing adjacent items and swapping them if they are in the wrong order

Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct.

A. No change is needed

B. merge

C. library

D. insertion

Correct Answer: A

---

**QUESTION 2**

You are writing a Web application that processes room reservation requests. You need to verify that the room that a guest has selected is not already reserved by another guest. Which type of programming should you use to determine whether the room is still available when the request is made?

A. client-side

B. server-side

C. multithreaded

D. batch processing

Correct Answer: B

For room availability we need to check a database located on a server.

---

**QUESTION 3**

You are writing a Web application that processes room reservation requests. You need to verify that the room that a guest has selected is not already reserved by another guest.

Which type of programming should you use to determine whether the room is still available when the request is made?

A. client-side

B. batch processing

C. server-side

D. multithreaded

Correct Answer: C

For room availability we need to check a database located on a server.

**QUESTION 4**

You need to create an application that processes data on a last-in, first-out (LIFO) basis. Which data structure should you use?

A. Queue

B. Tree

C. Stack

D. Array

Correct Answer: C

A stack implements LIFO.

**QUESTION 5**

You are creating an application that presents the user with a Windows Form. You need to configure the application to display a message box to confirm that the user wants to close the form. Which event should you handle?

A. Deactivate

B. FormClosed

C. Leave

D. FormClosing

Correct Answer: D

The Closing event occurs as the form is being closed.
