QUESTION 2

You use a laptop running Microsoft Windows 10. You connect to the Internet using the Wi-Fi connections at a coffee shop.

You plan to visit several websites while doing a research project and want to verify that your computer is configured for safe communication.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

Answer Area

Statements	Yes	No
You should configure your computer's network connection as a private network	<input type="radio"/>	<input type="radio"/>
You should enable Windows Firewall	<input type="radio"/>	<input type="radio"/>
You should disable file sharing from your computer	<input type="radio"/>	<input type="radio"/>
You should configure a VPN connection	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
You should configure your computer's network connection as a private network	<input type="radio"/>	<input checked="" type="radio"/>
You should enable Windows Firewall	<input checked="" type="radio"/>	<input type="radio"/>
You should disable file sharing from your computer	<input checked="" type="radio"/>	<input type="radio"/>
You should configure a VPN connection	<input checked="" type="radio"/>	<input type="radio"/>

QUESTION 4

You are setting up the networking for a single-site motel. For three different classes of users, you need to specify the most privileged network segment each can access.

Match each network to the class of users that can access it.

Instructions: To answer, drag the appropriate network from the column of the left to the class of users on the right. Each network may be used once, more than once, or not at all. Each correct match is worth one point.

Select and Place:

Network

Private network
Public network
Extranet

Answer Area

Guests
Employees
Business Partners

Network
Network
Network

Correct Answer:

Network

Answer Area

Guests
Employees
Business Partners

Public network
Private network
Extranet

*

Guest have only public access.

*

Only the Employees have access to the private network.

*

An extranet is a private network that uses Internet technology and the public telecommunication system to securely share part of a business's information or operations with suppliers, vendors, partners, customers, or other businesses. Reference: <http://en.wikipedia.org/wiki/Extranet>

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

When BitLocker is enabled and protecting a local drive, Trusted Platform Module (TPM) provides "pre-start system integrity verification for system and operating system drives". Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. 256-bit encryption that uses Advanced Encryption Standard (AES)
- C. a location that stores recovery keys for removable drives
- D. boot sector mapping for the startup process

Correct Answer: C

Computers that incorporate a TPM have the ability to create cryptographic keys and encrypt them so that they can be decrypted only by the TPM. This process, often called "wrapping" or "binding" a key, can help protect the key from disclosure. Each TPM has a root "wrapping" key, called the Storage Root Key (SRK), which is stored within the TPM itself. The private portion of a key created in a TPM is never exposed to any other component, software, process, or person.
