QUESTION 1

A tag with a well-formed SQL statement attempts to save a query object to the SESSION scope but generates a runtime error. When the same tag is executed with its name property pointing to a variable in local variables scope, the tag succeeds without a runtime error.

What is the most likely reason for this?

- A. Query objects cannot be saved to the SESSION scope.
- B. The SESSION scope only allows a limited number of variables per user.
- C. The SESSION scope allocates limited memory per user.
- D. Session management must be enabled in the current application.

Correct Answer: D

QUESTION 2

You are using the `xmlSearch()` function to retrieve data from an XML document. Which function signature most accurately describes the data types of the arguments?

- A. `xmlSearch(xml object, xpath)`
- B. `xmlSearch(string, xpath);`
- C. `xmlSearch(string, regular expression)`
- D. `xmlSearch(xml object, regular expression)`

Correct Answer: A

QUESTION 3

Which statement about a regular expression is true?

- A. It is a term used for common design patterns.
- B. It is a method of discussing design with clients.
- C. It allows developers to discuss code syntax.
- D. It is a method of searching strings.

Correct Answer: D

QUESTION 4

Your application has a page that has very high traffic. The page is rendered from data in a database. Your application should only run a query if it has been longer than 60 seconds since its last execution.

Which attribute of the cfquery tag allows you to specify a time where a query should NOT be executed again?

- A. cachedAfter
- B. cachedBefore
- C. cachedWithin
- D. cachedFor

Correct Answer: C

QUESTION 5

You have read xml stored in a database column into the variable xData.

Which two statements convert the variable from an XML document to an XML object? (Choose two.)

- A.
- B. #xData#
- C. #xData#
- D.
- E. #xData#

Correct Answer: AB
