QUESTION 1

You are asked by management to document all jobs written to make future maintenance easier. Which statement is true about annotations?

- A. The short job description can be identified within the Description Annotation stage.
- B. The Description Annotation stage contains both the short and full descriptions for the job.
- C. The background for the Description Annotation stage can be changed for each unique stage.
- D. The Description Annotation stage can be added several times at different locations to identify business logic.

Correct Answer: A

QUESTION 2

Configuring the weighting column of an Aggregator stage affects which two options. (Choose two.)

- A. Sum
- B. Maximum Value
- C. Average of Weights
- D. Coefficient of Variation
- E. Uncorrected Sum of Squares

Correct Answer: AE

QUESTION 3

Modular development techniques should be used to maximize re-use of DataStage jobs and components. Which statement represents Modular Development techniques?

- A. Job parameters should be used in Job Names.
- B. Hard code the Invocation ID to improve development process.
- C. Create a standard directory structure inside of the DataStage project directory for source and target files.
- D. Job parameterization allows a single job design to process similar logic instead of creating multiple copies of the same job.

Correct Answer: D

QUESTION 4

Which two statements are true about stage variables in a Transformer Stage? (Choose two.)

- A. Stage variables can be set to NULL.
- B. Stage variables cannot be set to NULL.
- C. Varchar stage variables can be initialized with spaces.
- D. Stage variables are refreshed with default values before each new input row is processed.
- E. A stage variable in one Transformer can refer to a stage variable in another Transformer, as long as the second Transformer was processed earlier in the job flow.

Correct Answer: AC

QUESTION 5

The derivation for a stage variable is: `Uppcase(input_column1) : \ ' \ ' : Uppcase(input_column2)`. Suppose that `input_column1` contains a NULL value. Assume the legacy NULL processing option is turned off.

Which behavior is expected?

- A. The job aborts.
- B. NULL is written to the target stage variable.
- C. The input row is either dropped or rejected depending on whether the Transformer has a reject link.
- D. The target stage variable is populated with spaces or zeros depending on the stage variable data type.

Correct Answer: B
