### QUESTION 1

What describes the purpose of the Enterprise Service Bus (ESB) in an SOA?

- A. It provides separation of concerns so that each service can be managed separately.
- B. It provides a design that allows components to be changed with less impact to the consumer.
- C. It allows a service consumer to make a service request without knowing the details of the operation.
- D. It implements service functionality by integrating existing back end service functionality using routing and transformation logic.

Correct Answer: B

---

### QUESTION 2

A company has prioritized their most important requirements for SOA to be the need to speed up integration, reduce application redundancy and provide the flexibility to change service implementations. Which type of project should be recommended?

- A. Create a common metadata model that can be used for all development projects.
- B. Implement an Enterprise Service Bus (ESB) and registry/repository as a connectivity layer in the SOA architecture.
- C. Document the existing architecture, legacy systems, and interfaces. Make this available in a common repository that can be accessed by all developers.
- D. Use business modeling tools to model and simulate the application development process and identify bottlenecks. Address highest priority bottlenecks that can be automated to E.

Correct Answer: B

---

### QUESTION 3

An organization plans to automate a business process and expose the result as a service. How should humans interact with such a business process in the context of SOA?

- A. A Web application may be developed to act as a service consumer, allowing humans to invoke the automated business process. Any activity in the business process may be
- B. The use of human activities in such a business process is not recommended since the slow response that will be received from humans is not suitable to the synchronous
- C. A Web application may be developed to act as a service consumer, allowing humans to invoke the automated business process from a browser. All activities in the business
- D. A Web application may be developed to act as a service consumer, allowing humans to invoke the automated

business process. Only unusual steps in the business process

E. All other activities should be performed by automated service providers.

Correct Answer: A

---

#### QUESTION 4

What is a key difference between a component and a service?

A. A service is deployed once and a component is deployed many times.

B. A component is deployed once and a service is deployed many times.

C. A component has an interface and a service implements the interface.

D. A service has an interface and a component implements the interface.

E. A service does not have a well-defined interface and a component does.

Correct Answer: D

---

#### QUESTION 5

Which people, organizational or technology factors would limit an organization's readiness for SOA?

A. Skills not available

B. Standardization of services in each industry

C. Tight integration with their business partners

D. Frequent inspection of the current business model and its components

Correct Answer: A
