QUESTION 1

Which of the following provides the best example of a product risk leading to a project risk?

- A. The signalling systems may have more defects than anticipated, leading to the need for more retesting to be carried out.
- B. There may be unexpected lags on the network traffic communication, causing drivers to slow the trains down unnecessarily.
- C. The new development staff may require training for this type of system, which, if not carried out, may lead to an increase in the number of defects introduced.
- D. The budget may need to be increased significantly during the project, otherwise there may be delays in the delivery of the system.

Correct Answer: A

QUESTION 2

Which of the following test design techniques could be used to do this?

- a.
Statement testing.
 - b.
Path testing.
 - c.
State transition testing.
 - d.
Exploratory testing.
- A.
a and c.
- B.
b and c.
- C.
c and d.
- D.
a and d.

Correct Answer: C Case Study# 5Scenario

A rail services provider is upgrading its signalling systems, to allow train drivers and signallers to communicate securely and timely.

This is seen as a safety critical system. The IT processes in place include many quality check points, including the use of the V-model for software development.

The provider has recently lost many of its software development and test staff to other organizations. The management staff has been retained, including the project and development manager for this upgrade. A recruitment drive is underway.

You have been brought in as a new test manager, and you have been asked to review the processes surrounding development and testing.

The project manager has been asked about a formal process of building test procedures using specification-based techniques.

QUESTION 3

Which of the following would be an entry criterion into site acceptance testing for the air quality monitoring system?

- A. That the code written to fulfil the requirement to monitor carbon dioxide levels has been 100% path tested.
- B. That the functional specification accurately reflects requirements R1 and R2.
- C. That the system has been tested at levels of oxygen usage well beyond anticipated personnel levels.
- D. That the requirements for temperature control have been signed-off.

Correct Answer: C

QUESTION 4

Which of the following is the main purpose of an incident tracking process?

- A. To identify the average number of steps required to recreate each incident.
- B. To calculate the average turnaround times per defect.
- C. To identify the priority of each incident.
- D. To understand the status of each incident at any given time.

Correct Answer: D

Case Study # 3

Scenario

Data is transmitted over the internet as a series of packets. Each packet is sent to its destination via the best available route. The decision on the best available route is made by a series of routers on the internet.

In order to make the best decision on the route to take, the router:

1) Scans the destination address and matches it against rules set up in a configuration table. 2) Checks the performance of the primary connection to see if it is good enough to send the packet. If not,

it seeks an alternative.

Routers handle many millions of packets being sent at the same time. Packets can take the form of email messages, data files etc.

QUESTION 5

Which of the following is an accurate depiction of the hierarchy of test management documentation (where the highest comes first)?

- A. Test policy-Test strategy-Project test plan-System test plan
- B. Test strategy-Test policy-Project test plan-System test plan
- C. Test policy-Project test plan-Test strategy-System test plan
- D. Project test plan-Test strategy-System test plan-Test policy

Correct Answer: A
