**QUESTION 1**

Which of the following issues is Iterative Development specifically designed to address?

- A. The very act of developing a system or solution will change the business requirements.
- B. Users understand their business processes but they don't usually understand application development.
- C. No developed solution will satisfy all users equally.
- D. Users often feel that IT does not understand the business.

Correct Answer: A

QUESTION 2

A consultant realizes after determining business requirements, that a complete solution will require several related but separate projects. The consultant must choose one project to deliver first. Which of the following describes the considerations that should govern that choice?

- A. Priority of IT, ease of development, resource availability, and data availability
- B. Business impact, ease of development, resource availability, and number of target users
- C. Data availability, ease of development, resource availability, and position of project sponsor in the organization
- D. Business impact, data availability, ease of development, and resource availability

Correct Answer: D

QUESTION 3

Which of the following statements best describes the Iterative Approach of application development?

- A. A prototype solution is developed after the initial user interviews. This prototype is then used as a basis for refining specific design requirements.
- B. The design step is repeated multiple times before proceeding to the development step. Each pass through the design step further refines the eventual solution.
- C. The solution is developed and delivered to the users. After approximately 2 weeks, the users are interviewed for any missing requirements and any new requirements form the basis for the next iteration.
- D. A prototype is created that addresses 80 to 90% of the business requirements. This is demonstrated to the users and their feedback is used to refine the prototype in subsequent iterations.

Correct Answer: D

QUESTION 4

Which of the following describes an advantage of using the dimensionally modeled relational(DMR) technique to access a normalized data structure?

- A. eliminates the need for aggregate tables
- B. reduces the time needed to fetch the required data
- C. enables drill up/down functionality in reports and ad hoc queries
- D. enables creation of IQDs for creating Power Cubes

Correct Answer: C

QUESTION 5

Which of the following statements describes the critical differences between a managed report and a query?

- A. A managed report is intended to be run on a regular execution schedule from a background batch process whereas a query is run interactively.
- B. A managed report is authored by trained developers whereas a query is authored by either trained developers or end users.
- C. A managed report is intended to be run on a regular execution schedule whereas a query is intended to be authored and run on-demand.
- D. A managed report prompts users for run-time parameters whereas a query does not.

Correct Answer: C
