100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by IBM Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Rows of data going into a Transformer stage are sorted and hash partitioned by the Input.Product column. Using stage variables, how can you determine when a new row is the first of a new group of Product rows?

- A. Create a stage variable named sv_IsNewProduct and follow it by a second stage variable named sv_Product. Map the Input.Product column to sv_Product. The derivation for sv_IsNewProduct is: IF Input.Product = sv_Product THEN "YES" ELSE "NO".
- B. Create a stage variable named sv_IsNewProduct and follow it by a second stage variable named sv_Product. Map the Input.Product column to sv_Product. The derivation for sv_IsNewProduct is: IF Input.Product sv_Product THEN "YES" ELSE "NO".
- C. Create a stage variable named sv_Product and follow it by a second stage variable named sv_IsNewProduct. Map the Input.Product column to sv_Product. The derivation for sv_IsNewProduct is: IF Input.Product = sv_Product THEN "YES" ELSE "NO".
- D. Create a stage variable named sv_Product and follow it by a second stage variable named sv_IsNewProduct. Map the Input.Product column to sv_Product. The derivation for sv_IsNewProduct is: IF Input.Product sv_Product THEN "YES" ELSE "NO".

Correct Answer: B

QUESTION 2

Which two statements are true about the use of named node pools? (Choose two.)

- A. Grid environments must have named node pools for data processing.
- B. Named node pools can allow separation of buffering from sorting disks.
- C. When named node pools are used, DataStage uses named pipes between stages.
- D. Named node pools limit the total number of partitions that can be specified in the configuration file.
- E. Named node pools constraints will limit stages to be executed only on the nodes defined in the node pools.

Correct Answer: BE

QUESTION 3

How does the Complex Flat File stage (CFF) support the use of OCCURS clauses within COBOL files?

- A. Each element of the OCCURS clause is treated as a subrecord.
- B. The CFF stage cannot process COBOL files with OCCURS clauses.

- C. Each element of the OCCURS clause is treated as a column of raw data.
- D. Each element of the OCCURS clause is treated as a separate element in an array.

Correct Answer: D

QUESTION 4

You would like to run a particular processing job within a job sequence for each weekday.

What two methods could be used? (Choose two.)

- A. Set the frequency property in the job scheduler to weekdays only.
- B. Add the job scheduler stage to the job sequence and set to weekdays only.
- C. Call a routine in the job sequencer that starts the processing job for each day you would like to process.
- D. Have a parameter set that contains the days of the week you would like to process and routine to parse the days of the week contained in the "day" parameter.
- E. Start Loop and End Loop activity stages on the job sequencer canvas where you loop through the days and pass a value for each day into the job via parameter.

Correct Answer: CE

QUESTION 5

You have a parallel job that based on operational recoverability requirements needs to be broken up into two separate parallel jobs. You have decided to use the Data Set stage to support this job design change. What two characteristics of Data Sets make them a good design consideration in your jobs design change? (Choose two.)

- A. They sort the data in a staging area.
- B. They automatically convert data types.
- C. They persist the parallelism of the job creating them.
- D. They use the same data types as the parallel framework.
- E. They persist parallelism into a temporary repository table.

Correct Answer: CD
