-  **800,000+** Satisfied Customers

QUESTION 1

Which function can be used to tune out Events/Flows with a specific QID and a specific destination IP address from contributing to an offense?

- A. False Positive
- B. Tuning Window
- C. Asset Discovery
- D. Network Hierarchy

Correct Answer: A

QUESTION 2

What must be done to put licenses into effect after applying a license file using the Managed License action of the System and License Management dialog?

- A. click on Deploy License
- B. select Restart System to activate the license key
- C. open the Deployment Editor, right-click on each host, and select Deploy
- D. select System and License Manage System and then select Deploy License Key

Correct Answer: A

QUESTION 3

How can asset profiles be searched?

- A. From the Assets tab
- B. From the Offenses tab
- C. Right-click on any
- D. Address from the Actions pull-down menu

Correct Answer: A

QUESTION 4

What is required to connect a WinCollect agent to IBM Security QRadar SIEM V7.1?

- A. SSH Keys

- B. domain credentials
- C. user name and password
- D. an authorized services token

Correct Answer: D

QUESTION 5

Which statement best describes the advantages of implementing NetFlow monitoring?

- A. If antivirus software signatures fail to detect malware infection, NetFlow monitoring can help identify malware propagation by using its own signatures.
- B. NetFlow provides the ability to detect suspicious log activity. Each log contains the number of bytes and packets transferred by both the SRC and DST allowing for volume- based reporting of network traffic.
- C. NetFlow provides deep packet inspection, from layers three to seven of the OSI model, increasing visibility into applications; whereas, traditional flow monitoring only provides visibility at layers three and four.
- D. NetFlow provides the ability to detect suspicious network activity, e.g. identify a potential botnet when Local to Remote traffic is matched to an IP address configured in a corresponding Remote Network group.

Correct Answer: D
