**QUESTION 1**

An online bookseller wants to extend its reach by providing a Web service for pricing used books. The current internal Web application is hosted on a mainframe. The new service must provide the same capabilities and qualities of service to

external users.

What are the appropriate design patterns to use?

- A. Zoned Enterprise Service Bus (ESB) and As-is Host Application
- B. Zoned ESB and Exposed Application
- C. Self-Service and Exposed ESB Gateway
- D. Self-Service and As-is Host Application

Correct Answer: C

QUESTION 2

If an organization follows the ITIL best practices when considering a change to an existing service, where should they find the existing consumers of the service and the instances in use?

- A. In the operations run book
- B. In the operational architecture document
- C. In the configuration management database
- D. In the Service Registry

Correct Answer: C

QUESTION 3

An SOA Solution Designer's recommendation for a financial institution is to use a separate gateway and Enterprise Service Bus (ESB) component. The decision considered a number of factors including the organizations current IT

environment, staff skills, and non-functional requirements. However, the client has investigated using a more powerful single SOA appliance as a gateway and ESB to save money.

Which action should be taken?

- A. Make sure that the gateway can scale to the combined non-functional requirements of the ESB and gateway components.
- B. Suggest that they use multiple security domains for each of the component implementations.
- C. Suggest the client reconsider the impact of combining the gateway and ESB functionality on the same physical

hardware.

D. Implement the customer's suggestions and build the ESB into the gateway.

Correct Answer: C

QUESTION 4

A company is implementing a new Web service to provide the ability to access customer details as part of a number of high-volume business processes within an SOA environment.

During the deploy phase of the SOA lifecycle, which key quality assurance activity should occur?

- A. Tracking the service in the service registry.
- B. Assessing existing services that are part of the same business processes.
- C. Simulating the business process to find the optimum path length to ensure maximum throughput.
- D. Testing to ensure that the service meets performance targets for the business processes.

Correct Answer: D

QUESTION 5

A company wants to integrate a number of existing best-of-breed applications by implementing service facades and an Enterprise Service Bus (ESB). The initial scenario involves the transfer of order information between a number of these backend services depending on business rules. An SOA Designer is asked to capture the functional requirements.

What is the most appropriate starting point?

- A. Analysis of the information requirements of the existing applications
- B. Investigation into appropriate industry standards for transferring data
- C. Creation of use cases to understand what the services may be and how they interact
- D. Define the component model associated with the existing applications and specify the service interfaces

Correct Answer: C
