QUESTION 1

An organization is adding composite services to the environment. The services are running across different environments and operating systems. When considering secure access, what is one of the additional challenges that must be considered?

- A. The requirement to use identity provisioning across the service request
- B. The requirement to use the same authorization privileges throughout the service request
- C. The requirement to use the same identity throughout the service request
- D. The requirement to use the same credentials throughout the service request

Correct Answer: C

QUESTION 2

An SOA project implementation is underway in a large government organization. The development, testing, staging, and production environments have been installed and configured. Each environment consists of an Enterprise Service Bus

(ESB), a registry and repository, a Web server, application servers, and Business Process Engine (BPEL).

With only weeks before the project goes live with a business critical application, what should be recommended?

- A. Functional, performance and security tests are undertaken on the infrastructure and services as soon as possible.
- B. The capacity plan should be checked to ensure the systems are specified to cope with the predicted average and peak loads.
- C. Software Configuration Management (SCM) processes such as promotion of code through the various environments be tested to ensure policies defined in the governance model are enforced.
- D. Communication between the various environments and between the various system components is thoroughly tested.

Correct Answer: A

QUESTION 3

A delivery company currently has a process where office staff must update a number of legacy systems with the status of deliveries from paper-based forms. The company wants to deploy new wireless handheld devices to their drivers so

they can report on the progress of daily deliveries in real-time.

What should be the initial approach for this scenario?

- A. Analyze the business process to uncover a new business model, then create service wrappers for legacy systems.
- B. Create service wrappers for legacy systems, then aggregate existing data and enable human interaction.

- C. Create service wrappers for the legacy systems, then reuse them in different processes.
- D. Analyze the existing information sources to deliver them as a service, then reuse the services in different processes.

Correct Answer: B

QUESTION 4

An IT organization for a company has a mature management environment and follows the ITIL standards. They use WebSphere Process Server for business processes. The systems are performing as required but the business processes are not meeting executive management's expectations. What should the SOA Designer recommend for this environment?

- A. Use WebSphere Business Monitor to monitor the business KPIs
- B. Use WebSphere BusinessEvents to correlate the events
- C. Use Tivoli Composite Application Managerfor SOA to monitor the services
- D. Use Tivoli Business Systems Manager to monitor the resources in the business processes

Correct Answer: A

QUESTION 5

A midsize city is experiencing rapid growth that requires extensive changes in city land use regulations. Under this pressure, many land use disputes are getting caught in endless inter- departmental exchanges to complete data collection using a variety of completion criteria. This is angering both citizens and land developers. Which approach to SOA is likely to have the greatest impact?

- A. Apply governance policies and procedures to control inter-departmental exchanges.
- B. Align the departments with a common end-to-end process with shared business services.
- C. Align the departments with a common data model and data access services to avoid confusion and duplication.
- D. Create citizens portals to provide a mechanism for citizens to more easily monitor and manage their role in the process.

Correct Answer: B
