- **800,000+** Satisfied Customers

QUESTION 1

Due to a number of recent acquisitions, an organization is reviewing common services provided by each of the acquired companies to reduce duplication. As part of this review, they discover functionally equivalent services deployed by all of the different organizations.

Which technique provides valuable feedback from operations about which duplicate services most completely meet non-functional requirements of the service?

A. Use business modeling tools to drive process simulations based on operational data.

B. Use an integrated systems management console with an integrated capacity planning tool

C. Use a business activity monitor dashboard with Service Level Agreement (SLA) templates and policies to monitor and analyze KPIs.

D. Use the metadata and usage information from the service registry to determine service usage.

Correct Answer: B

QUESTION 2

A group of SOA Architects is discussing strategies to improve re-use without impacting the existing project deadlines. Which action is most likely to achieve the stated objective?

A. Modify existing applications to use service interfaces that most closely correspond to existing APIs.

B. Integrate existing applications based upon a canonical message model derived from industry- relevant specifications.

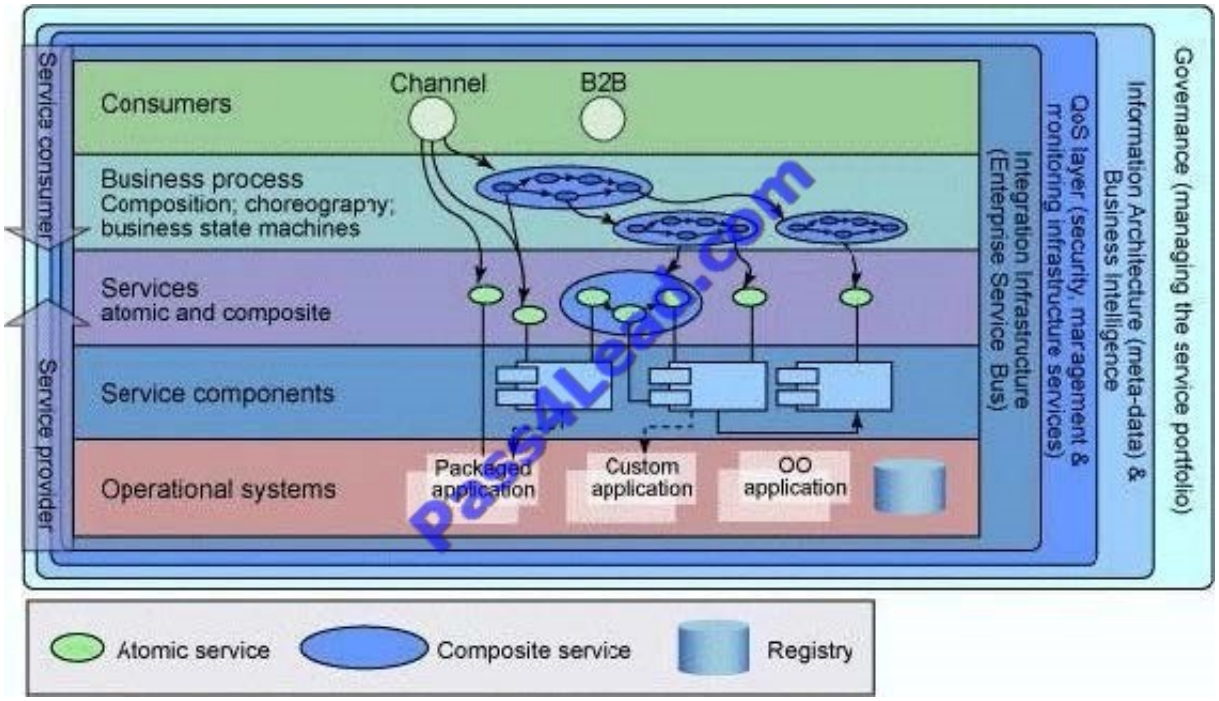
C. Integrate existing applications using adapters that expose existing functionality as services.

D. Use a mixed strategy of modifying existing applications and adaptation to service descriptions that are aligned with business goals.

Correct Answer: C

QUESTION 3

A company is using the IBM SOA Solution Stack to create a new composite application to keep up with the changing marketplace. Functions and data from several existing Enterprise Information Systems (EIS) will be aggregated into the new application using a top-down approach. See the information in the Exhibit.



Which solution is the most appropriate for implementation?

A. Exposing existing applications using multiple adapters

B. Exposing existing systems to heterogeneous clients

C. Exposing existing applications with service components

D. Exposing existing systems with a Web services gateway

Correct Answer: C

QUESTION 4

A manufacturing company can receive many customer orders at once. When an order is received, the OrderProcessing business process allocates a unique order number, updates the Customer service and invokes the Credit service. The

process does not continue until the Credit service notifies it that the customer\\'s details are valid, and this can take some time.

Since multiple instances of the OrderProcessing process can exist at runtime, how can a specific instance be selected when the Credit service is ready to send notification?

A. By creating a time stamp that is correlated to the customer ID

B. By creating a qualified identifier that includes the customer number

C. By creating a correlation set that includes the order number and customer ID

D. By implementing a parallel activity as part of the OrderProcessing flow

Correct Answer: C

QUESTION 5

A large machine manufacturing company is using WebSphere Message Broker as an Enterprise Service Bus (ESB) providing routing and transformation functions. Manufacturing data is available from MQ enabled CICS transactions.

Customer information is available via existing Web services on WebSphere Process Server (WPS) accessing UDB via JDBC. They are developing a new service to track the status of a customer\\'s specific machine through production. The

SOA Designer has decided to first create a Manufacturing Information service on WPS using JMS to access the CICS transactions.

What is the rationale for this approach?

A. Reusability

B. Reliability

C. Portability

D. Data Consistency

Correct Answer: A
