QUESTION 1

An administrator needs to configure a property of the Broker SOAPListener to ensure that it will meet a new requirement. The property is not currently configurable. What action should the administrator take to meet this need?

A. Open a Requirement.

B. Open a Problem Management Report (PMR).

C. Alter the config.xml of the Axis engine.

D. Use the Admin API to update the execution group.

Correct Answer: A

QUESTION 2

An administrator needs to administer a broker on a Windows platform through the Administration API exerciser. How can the administrator start the exerciser?

A. Set the mqsiclasspath and then invoke ConfigManagerProxy.sh

B. Invoke the shell script install_dir/sample/ConfigManagerProxy/StartConfigManagerProxyExerciser

C. Run the shell script install_dir\sample\ConfigManagerProxy\StartConfigManagerProxyExerciser from a WebSphere MessageBroker Command Console.

D. Put a .bat script install_dir/sample/ConfigMangerProxy/StartConfigManagerProxyExerciser which can include the brokerenvironment and start the Configuration Manager.

Correct Answer: C

QUESTION 3

A message flow that includes HTTP nodes is deployed to 3 execution groups in a broker. All HTTP nodes are configured to use a single port. After performance testing, it is decided that the inbound and outbound HTTP messages in each execution group should be routed through separate listener ports in order to achieve higher throughput. An administrator is asked to make the configuration changes. Which one of the following actions is required to achieve this?

A. Run command mqsichangeproperties to enable the broker-wide listener.

B. Run command mqsichangeproperties to disable the broker-wide listener.

C. Run command mqsichangeproperties to disable all of the execution group listeners.

D. Run command mqsichangeproperties to enable one of the execution group listeners.

Correct Answer: B

QUESTION 4

A multi-instance broker has been created on nodes A and B. To verify the multi-instance broker, an administrator starts the broker on node A and then on node B, and then runs the command mqsilist. What state of the broker will be displayed if the multi-instance broker is running successfully? The broker is running:

A. in active mode on both nodes A and B.

B. in active mode on node A and stopped mode on node B.

C. in active mode on node A and in standby mode on node B.

D. in active mode on node B and in standby mode on node A.

Correct Answer: C

QUESTION 5

An administrator is asked to write an Administration API (CMP API) based application for monitoring the message broker environment. What are prerequisites to run Java applications that use the CMP API?

A. A configuration manager API (CMP API) Exerciser.

B. A Java Development Kit (JDK) at a supported Java level.

C. A WebSphere MQ queue manager running on the server.

D. A local broker running on that environment to connect to remote brokers.

E. The WebSphere MQ Classes for Java added to classpath.

Correct Answer: BE
