**QUESTION 1**

A BPM application developer has created three process applications containing multiple business processes to automate a customer's order fulfillment activities. During development, a single tracking group was used in the three process applications to support a reporting solution that will track data across all three process applications.

How will the BPM application developer retrieve data from the Performance Data Warehouse while completing the implementation of the reporting solution? The data will be retrieved from:

- A. a single database view, with an ID to distinguish each implementation.
- B. a single database view, with a single ID to identify the collection of implementations.
- C. three database views, with an ID to distinguish each implementation.
- D. three database views, with a single ID to identify the collection of implementations.

Correct Answer: A

QUESTION 2

A document imaging and management company is implementing a business process diagram which requires a rules evaluation for the retention time of incoming documents. A BPM Analyst has requested that these rules be created using a natural language technology within IBM Business Process Manager V8.0.

What decision service component should the BPM application developer use to create these rules?

- A. BAL Rule
- B. Server Script
- C. Decision Table
- D. JRules Decision Service

Correct Answer: A

QUESTION 3

Which statement correctly describes a type of service available in Business Process Manager V8.0?

- A. An Ajax service can be used to generate tasks in the IBM Process Portal user interface.
- B. An Integration service is the only type of service that can contain a Java or Web Service integration component.
- C. In addition to implementing business rules, Decision services are used for manipulating variable data.

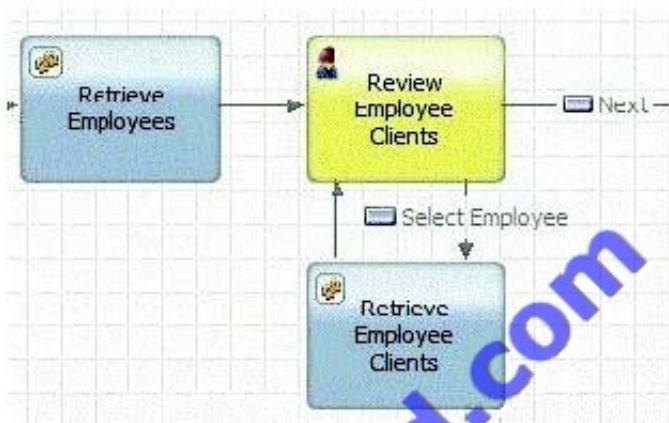

D. General System services are used to build custom functionality into the BPD for any non-supported service types.

Correct Answer: B

QUESTION 4

A company has a human service that enables a business user to select an employee and view the employee's list of clients. Review the human service diagram snippet and Review Employee Clients coach.

Select an Employee

Client List

Client Name	Client Company
Client Name	Client Company

Next

The first component of the Review Employee Clients coach with label Select an Employee is a coach view named Select Employee, which is properly configured to fire a boundary event.

Assuming that the Select Employee coach view's Business Data and Configuration Options are specified properly, what does the BPM application developer need to specify so that the Client List table is populated once an employee is selected?

Within the coach view's:

- A. view event handler, specify this.context.trigger()
- B. view event handler, specify this.context.refreshView()
- C. change event handler, specify this.context.trigger()
- D. change event handler, specify this.context.refreshView()

Correct Answer: C

QUESTION 5

A BPM application developer is asked by a system administrator to fix an issue with a failed process instance in a on-line runtime environment. The system administrator has determined that the problem is with a variable called `tw.local.carSelection`. The value of `tw.local.carSelection` is incorrect and needs to be set to "Truck". Assuming the BPM application developer has been granted all security privileges required, which of the following approaches are valid to fix the problem? (Choose two)

A. Using the Inspector tab via the Process Designer:

1.

Select the failed process

2.

Use the execution evaluator to change the data

3.

Select the '\\Resume\\' button

B. Using the Inspector tab via the Process Designer:

1.

Select the failed process

2.

Select the variables tab

3.

Edit the data

4.

Select the '\\Resume\\' button

C. Using the Designer tab via the Process Designer:

1.

Open the process

2.

Change the data

3.

Deploy a new snapshot

4.

Select "Migrate Existing Instances"

D. Using a database client connected to the BPM Process DB:

1.

Open the LSW_BPD_INSTANCE_DATA table

2.

Identify the failed process ID

3.

Execute SQL to update the data

E. Using the Process Inspector tab via the Process Admin Console:

1.

Select the failed process

2.

Select the failed task

3.

Open the data tree

4.

Edit the data

5.

Select '\\Retry Failed Steps\\'

Correct Answer: AE
