**QUESTION 1**

Which technology can be used to help ensure the efficient transport of VoIP traffic?

- A. DNS
- B. QoS
- C. H.323
- D. RSTP

Correct Answer: B

Answer option B is correct.

Quality of Service (QoS) is a technology for prioritizing traffic on the network. VoIP requires optimization of bandwidth to ensure users do not experience "call drops" created by lack of bandwidth due to congestion issues. QoS is a mechanism

to provide this optimization.

QUESTION 2

John is a security administrator for a large retail company. He wishes to address new threats, what is the most important step for him to take in addressing new threats?

- A. Performing a proper risk assessment
- B. Performing a vulnerability assessment
- C. Ensuring the firewall is properly configured
- D. Creating security policies for the new threat

Correct Answer: A

A risk assessment is the most important first step. Without a proper risk assessment, it is impossible to properly perform any other security steps.

QUESTION 3

Which of the following features are provided by SAN for SQL servers? Each correct answer represents a complete solution. Choose all that apply.

- A. Faster disaster recovery
- B. Non-clustered environment
- C. Storage efficiencies

D. Increased database size

Correct Answer: ACD

Storage area network (SAN) is a dedicated network that provides access to a consolidated, block level data storage.

SAN provides the following features for SQL servers:

Increased database size

Clustered environment

Performance advantages

Storage efficiencies

Faster disaster recovery

QUESTION 4

Juanita is a network administrator for a large insurance company. She is concerned about the security risks posed by the employees of the company. There are very thorough and comprehensive security policies at the company. Which of the following would be most effective action for Juanita to take?

- A. Putting the company policies on the corporate intranet
- B. Make all employees sign the company policy
- C. Coordinate with HR to fire anyone who violates any policy
- D. Improve employee security education

Correct Answer: D

Employees usually violate company policies because they are not aware of how significant the risks are. Educating employees is an excellent way to address this.

Answer option C is incorrect. Some employees may need to be terminated for their actions, but that cannot be a default policy.

Answer option E is incorrect. Employees may sign the policy and still not really read it, comprehend it, or follow it.

Answer option A is incorrect. While the company intranet is a good place to distribute company policies, it won't (by itself) improve compliance.

QUESTION 5

Which of the following concepts are included in the security of a SAN? Each correct answer represents a complete solution. Choose all that apply.

- A. Host adapter-based security
- B. Storage-controller mapping

C. Switch zoning

D. IDS implementation

Correct Answer: ABC

Storage area network (SAN) is a dedicated network that provides access to a consolidated, block level data storage. The security of SAN is completely dependent upon the users authentication or authorization. SAN security includes the following concepts:

Host adapter-based security: Security measures for the Fibre Channel host bus adapter can be implemented at the driver level.

Switch zoning: Switch zoning is used in a switch-based Fibre Channel SAN. It refers to the masking of all nodes connected to the switch.

Storage-controller mapping: By mapping all host adapters against LUNs in the storage system, some storage sub-systems accomplish LUN masking in their storage.

Answer option D is incorrect, IDS is not implemented for the security of a SAN.
